Not so very long ago, some might have considered wood a material of the past, long since replaced by more modern components such as concrete and steel. The truth is radically different. Bolstered by new manufacturing techniques and ecological benefits, wood has seen a fabulous resurgence in contemporary construction. This Bibliotheca Universalis edition explores how architects around the world ...

Philip Jodidio studied art history and economics at Harvard, and edited *Connaissance des Arts* for over 20 years. His TASCHEN books include the *Architecture Now!* series and monographs on Tadao Ando, Santiago Calatrava, Renzo Piano, Jean Nouvel, Shigeru Ban, Richard Meier, and Zaha Hadid.

"Concrete? That characterless stuff of parking lots or Communist tower blocks, right? Well, yes. And no. Concrete is actually a name applied to a remarkably wide range of building substances, and, when properly handled, is one of the noble materials of contemporary architecture. A kind of "liquid stone" at the outset, it is malleable, durable, and capable of prodigious feats of engineering. This two-volume book highlights the best work done in concrete of recent years. It includes such stars as Zaha Hadid, Herzog & de Meuron, and Steven Holl, but also surprising new architects like the Russians SPEECH, and rising stars of the international scene like Rudy Ricciotti from France, as well as artists such as James Turrell, who turned the famous concrete spiral of Frank Lloyd Wright's Guggenheim in New York into the setting of one of his most remarkable pieces."--Provided by publisher.

Travel the world to investigate one of the greatest renaissances in architecture: wood. How has this elemental material come to steal the show at luxury hot spring structures and cutting-edge urban renewal schemes? With 100 projects from China, Chile, and everywhere in between, this global survey explores the technical, environmental, and...

Open the door into 100 of the most beautiful and pioneering houses of the past two decades. With featured architects including Daniel Libeskind, Herzog & de Meuron, and Zaha

Hadid, this is a dependable global digest of the nuances, challenges, and opportunities of turning all the emotional and practical requirements of "home" into a constructed...

The stunning houses of Grant Kirkpatrick and his firm, KAA Design, exemplify why so many of us look to Southern California as the pinnacle of sophisticated modern living. Two dozen magnificent custom homes, modern in style, are built of sensuous materials and sited to make the most of nature, views, and sunlight. This collection of visionary residences, shown in gorgeous photographs and colorful drawings, represents the California Dream, by an architect chosen by celebrities including Tom Hanks and Rita Wilson, Matt Damon, and Julia Louis-Dreyfus, for their personal retreats. Kirkpatrick offers his reflections on these beautiful projects and the design strategies behind their creation.

ARCHITECTURAL STRUCTURE & DESIGN. When is a house ecological? Does the use of natural materials and solar cells on the roof make a building an example of "green" architecture? Perhaps even Antoni Gaudi and Frank Lloyd Wright designed "greener" buildings than most contemporary architects, whose low-energy houses scarcely differ outwardly from traditional ones. James Wines puts up the various - and often irreconcilable - concepts of environmentally-friendly architecture for discussion, making a case for an architecture that not only focuses on technological solutions, but also tries to reconcile man and nature in its formal idiom. Among the examples of contemporary ecological architecture presented are works by Emilio Ambasz, Gustav Peichl, Arthur Quarmby, Jean Nouvel, Sim Van der Ryn, Jourda and Perraudin, Log ID, James Cutler, Stanley Saitowitz, Francois Roche, Nigel Coates and Michael Sorkin.

Over the past 10-15 years a renaissance in wood architecture has occurred with the development of new wood building systems and design strategies, elevating wood from a predominantly single-family residential idiom to a rival of concrete and steel construction for a variety of building types, including high rises. This new solid wood architecture offers unparalleled environmental as well as construction and aesthetic benefits, and is of growing importance for professionals and academics involved in green design. Solid Wood provides the first detailed book which allows readers to understand new mass timber/massive wood architecture. It provides: historical context in wood architecture from around the world a strong environmental rationale for the use of wood in buildings recent developments in contemporary fire safety and structural issues insights into building code challenges detailed case studies of new large-scale wood building systems on a country-by-country basis. Case studies from the UK, Norway, Sweden, Germany, Austria, Italy, Canada, the United States, New Zealand and Australia highlight design strategies, construction details and unique cultural attitudes in wood design. The case studies include the most ambitious academic, hospitality, industrial, multi-family, and wood office buildings in the world. With discussions from leading architectural, engineering, and material manufacturing firms in Europe, North America and the South Pacific, Solid Wood disrupts preconceived notions and serves as an indispensable guide to twenty-first century wood architecture and its environmental and cultural benefits.

Each book in this series features a detailed introduction with approximately 35 photographs, a timeline of the most important events, and a selection of the most important works of the epoch. This volume looks at Roman art.

The twenty-first-century woodsman discusses his unique sustainable building style which combines the timber framing methods of his British ancestors with new techniques and an environmental consciousness.

"The 100 houses presented here not only show a broad spectrum of building styles and interior designs, but also tell 100 individual stories of architects and their own four walls, opening a new window on the history of twentieth-century European architecture."--Jacket.
