By and large, corporations of the 21st century have come to realise that their obligations to societies in terms of corporate social responsibility are fourfold: economic, ethical, altruistic and strategic. Meeting these four responsibilities is crucial to their survival in their various markets and industries; it also requires them to rewrite their previously less socially responsible business models in order to do so. All indications continue to suggest that it is those organisations that are perceived to be socially responsible by stakeholders in modern markets that survive and prosper. Corporations have equally realised that by being innovative in all things – including their CSR activities and initiatives – they will add value to the so-called bottom line, to the positive contributions they make to society and to how they are perceived by their key stakeholders. However, many criticisms have been made of CSR in its current form, often related to the lack of value that it generates within the enterprise and the fact that it offers only a partial and short-term response to the full challenges of sustainable development. The time has come to shift the CSR focus away from risk management towards a more progressive and entrepreneurial approach that seeks to create value and identify sustainable opportunities for strategic innovation. This book aims to explore, inspire and support creative, innovative and strategic CSR. "Innovation" in this book means new products, services and technologies and, in addition, new organisational and

institutional systems, structures and new business models that empower the organisation to advance strategically in an ever more competitive business world. Both research and practice show that CSR has mainly been approached in terms of value protection and risk management, where the main objective has been to protect companies' existing assets or avoid scandals. Therefore, in many cases where CSR remains at the forefront of business activity, it does not lead to fundamental changes and is not yet integrated as a strategic component where it could create value, generate new ideas and open new opportunities. How do corporate entities shift their attention from risk management to value creation? This is the key question that this book attempts to answer, both theoretically and empirically as well as through real case studies and experiences. With contributions from a crème de la crème of scholars from 12 countries, Innovative CSR gathers together a cornucopia of innovative practices that will be essential reading for academics and practitioners alike.

Coalgebraic logic is an important research topic in the areas of concurrency theory, semantics, transition systems and modal logics. It provides a general approach to modeling systems, allowing us to apply important results from coalgebras, universal algebra and category theory in novel ways. Stochastic systems provide important tools for systems modeling, and recent work shows that categorical reasoning may lead to new insights, previously not available in a purely probabilistic setting. This book combines coalgebraic reasoning, stochastic systems and logics. It provides an insight into the principles of coalgebraic logic from a categorical point of view, and applies these systems to interpretations of stochastic coalgebraic logics, which include well-known modal logics and continuous time branching logics. The author introduces stochastic systems together with their probabilistic and categorical foundations and gives a comprehensive discussion of the Giry monad as the underlying categorical construction, presenting many new, hitherto unpublished results. He discusses modal logics, introduces their probabilistic interpretations, and then proceeds to an analysis of Kripke models for coalgebraic logics. The book will be of interest to researchers in theoretical computer science, logic and category theory.

At least one child in five experiences some form of learning difficulty, but: * Learning difficulties as we understand them DO NOT exist * They are not diseases just symptoms * These symptoms never appear alone * They are treatable and avoidable Dr Robin Pauc, an expert in child neurology, approaches learning difficulties, including Dyslexia, ADD, OCD, ADHD, Dyspraxia and Tourette's syndrome of childhood, from a truly ground-breaking perspective. All human babies are born prematurely and develop special new brain cells four months after birth. Every human's development in the womb and particularly in these early stages of life can, therefore, be affected by development delay, which can blight childhood and marginalize a child at school. Since our brains continue to grow, however, the symptoms can also be treated. Is That My Child? Explains the background to human developmental delay and contains: * Advice on how to get the best assessment for your child and an explanation of what the examination must include * The effects - good and bad - of certain foods on the brain * Exercises and computer programs that you can use to expand your child's neural function * Case histories of children on whom this plan has worked In the single biggest breakthrough in the history of learning difficulties, Is That My Child? explains the cause of Development Delay Syndromes, uses simple, easy-to-follow tips to show you how to greatly reduce the risk of your child suffering, and gives advice on what can be done to treat those children that do.

Quantum Private Communication covers the fundamentals of the areas of secure communication, quantum cryptography, quantum communication, and their physical implementation with applications. The book appears in a timely manner for an emerging field at the crossroad of classic private communication and quantum physics. Graduate students and scientists alike in communication engineering, computer science, electronic engineering, physics and mathematics will benefit from the book. Professor Guihua Zeng teaches and conducts research at the Department of Electronic Engineering of Shanghai Jiao Tong University and spent an Alexander von Humboldt Fellowship at the University of Freiburg, Germany.
