The 1973 oil crisis forced the American automotive industry into a period of dramatic change, marked by stiff foreign competition, tougher product regulations and suddenly altered consumer demand. With gas prices soaring and the economy in a veritable tailspin, muscle cars and the massive "need-for-speed" engines of the late '60s were out, and fuel efficient compacts were in. By 1980, American manufacturers were churning out some of the most feature laden, yet smallest and most fuel efficient cars they had ever built. This exhaustive reference work details every model from each of the major American manufacturers from model years 1973 through 1980, including various "captive imports" (e.g. Dodge's Colt, built by Mitsubishi.) Within each model year, it reports on each manufacturer's significant news and details every model offered: its specifications, powertrain offerings, prices, standard features, major options, and production figures, among other facts. The work is heavily illustrated with approximately 1,300 photographs.

Extensively researched and authoritatively and enthusiastically written, entries describe in detail the history of each particular company and of course the models for which they are famous.

This is a brilliant examination of the complex processes of the post-1990 transformation in the Czech automotive industry and its selective integration into the West European system. The post-1990 restructuring of the industry is analyzed in the context of its pre-1990 development and in the context of the East European automobile industry as a whole. Specifically, the book examines the development and post-1990 restructuring of the Czech car, components, and truck industries.

How Cool Are Penguins is a book that will introduce young children to the world of penguins. It is written and illustrated in a fun and informative way that will entertain both the young and the young at heart.

Proponents of arms control and disarmament are often confronted with the argument that reductions in defense expenditure lead to cutbacks in military industries and thus to economic hardship. While a reduction in defense production would cause some economic dislocation, this would be mitigated by the ability of the economy to adapt to changing patterns of production. This book, first published in 1983, assesses the likely effects of reductions in defense industries by an examination of the roles these industries play in national economies. Each chapter discusses industry employment, output, research and development, capital

value, profitability, concentration and competition, internal organization and regional employment concentration. Other questions considered include the economic importance of weapons exports, the defense industry as a 'leading edge' in maintaining national technological capabilities, and the reliance of individual firms on defense contracting.

A timeless classic vehicle history book, over 2100+ photos of US military vehicles from 1900 to 1983. Covers everything from bicycles, jeeps, 4X4's, 6X6's, 8X8's, 1/4 ton's to 50 ton trucks. A must for military vehicle enthusiasts and collectors.

Take-home packs feature Sunshine favourites. Each pack includes great fiction and non-fiction texts that students will want to read. The books are created to ensure beginning readers have a successful reading experience while enjoying what they read.
