The ATL-98 Carvair is a truly unusual aircraft. Converted from 19 C-54 World War II transport planes and two DC-4 airliners into a small fleet of air ferries by Aviation Traders of Southend, England, the Carvair allowed commercial air passengers to accompany their automobiles onboard the aircraft. The planes were dispersed throughout the world, operating for 75 airlines and transporting cars, royalty, rock groups, refugees, whales, rockets, military vehicles, gold, and even nuclear material. After more than 45 years, two Carvairs were in 2008 still in service. This comprehensive history of the ATL-98 Carvair, begins with corporate histories and profiles of key players, including William Patterson, Donald Douglas, and Freddie Laker. Four chapters illustrate the evolution of the car-ferry as a viable aircraft, the history of Aviation Traders, engineering details incorporated into the Carvair's production, and major Carvair operators. Chapters on each of the fleet's 21 planes provide individual histories and anecdotes. Seven appendices provide several kinds of data and the book is fully indexed.

No-one approaches aging with enthusiasm. Activities we accomplish easily in our 20s and 30s become more difficult as we grow old but, though change is inevitable, recognising and understanding precisely what is happening to our bodies and minds allows us to continue to manage and enjoy our lives. Patrick Rabbitt is a cognitive gerontologist who has researched physical and mental aging for over 50 years and so can interpret his personal daily experiences of the aging process through a comprehensive understanding of what gerontological research has revealed about how our bodies and brains age, and how these changes affect our everyday experiences and lives. Engagingly written, Professor Rabbitt's book is a fascinating account of why our sensory and cognitive experiences change as we get older, and what these developments mean for our overall physical and emotional well-being. Describing the latest research the book covers the mental

changes that affect our daily lives such as those in memory, intelligence, attention, sleep, vision and hearing, taste and smell, touch and balance, anxiety, depression and perception of the passage of time. It also discusses how far we can keep and develop the skills we have mastered over our lifetimes. The book debunks unhelpful myths about the aging process and offers guidance on how we can age better. This is an absorbing account of the aging process from one of the most eminent gerontologists working today. Its warmth and candour make it an engaging and helpful guide for those interested in understanding their own, or their relatives' ageing. Its rigour and comprehensiveness make ideal for students seeking an accessible alternative to standard textbooks on aging and for health professionals working with older people.

This book constitutes the thoroughly refereed post-proceedings of the 15th International Workshop on the Implementation of Functional Languages, IFL 2003, held in Edinburgh, UK in September 2003. The 11 revised full papers presented were carefully selected during two rounds of reviewing and revision from 32 workshop presentations. The papers are organized in topical sections on language constructs and programming, static analysis and types, parallelism, and generic programming.

ETAPS2002 was the 7th instance of the European Joint Conferences on Theory and Practice of Software. ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences. This year it comprised 5 conferences (FOSSACS, FASE, ESOP, CC, TACAS), 13 satellite workshops (ACL2, AGT, CMCS, COCV, DCC, INT, LDTA, SC, SFEDL, SLAP, SPIN, TPTS, and VISS), 8 invited lectures (not including those specific to the satellite events), and several tutorials. The events that comprise ETAPS address various aspects of the system -

development process, including specification, design, implementation, analysis, and improvement. The languages, methodologies, and tools which support these activities are all well within its scope. Different blends of theory and practice are represented, with an inclination towards theory with a practical motivation on one hand and soundly-based practice on the other. Many of the issues involved in software design apply to systems in general, including hardware systems, and the emphasis on software is not intended to be exclusive.
