Fully revised, new edition presenting students with latest advances in field of biochemistry. Features clinical case studies, MCQs, short questions, essays and viva voce questions for revision.

The chapters on molecular genetics, recombinant DNA technology, nutrition, toxins, diabetes mellitus, cancer and AIDS are unique in giving in-depth perception in a concise manner to these highly relevant topics. The medical applications of theoretical facts are clearly pointed out and highlighted at the appropriate places. A questions banks at the end has been put to help the students.

This book covers in detail the mechanisms for how energy is managed in the human body. The basic principles that elucidate the reactivity and physical interactions of matter are addressed and quantified with simple approaches. Three-dimensional representations of molecules are presented throughout the book so molecules can be viewed as unique entities in their shape and function. The book is focused on the molecular mechanisms of cellular processes in the context of human physiological situations such as fasting, feeding and physical exercise, in which metabolic regulation is highlighted. Furthermore the book uses key historical experiments that opened up new concepts in biochemistry to further illustrate how the human body functions at molecular level, helping students to appreciate how scientific knowledge emerges. New to this edition: - 30 challenging practical case studies (2-3 at the end of each chapter) based on movies, novels, biographies, documentaries, paintings, and other cultural and artistic creations far beyond canonic academic exercises. - A set of challenging questions and

problems in the end of each case study to further engage students with the applications of medical biochemistry - Insights into the answers to the challenging questions to help steer teaching/learning interactions key to productive lectures, PBL (problem-based learning) or traditional tutorials, or e-learning approaches. Advance praise for the second edition: “The Challenging Cases are compelling both from a scientific viewpoint and for the perspective they provide on the history of medicine.” David M. Jameson, University of Hawaii “Using case studies to reinforce the biochemistry lessons is extremely effective – as well as entertaining!” Joseph P. Albanesi, UT Southwestern Medical Center Advance Praise for the first edition: “This textbook provides a modern and integrative perspective of human biochemistry and will be a faithful companion to health science students following curricula in which this discipline is addressed. This textbook will be a most useful tool for the teaching community.” Joan Guinovart Former director of the Institute for Research in Biomedicine, Barcelona, Spain, and former president of the International Union of Biochemistry and Molecular Biology, IUBMB

The eighth edition of Textbook of Medical Biochemistry provides a concise, comprehensive overview of biochemistry, with a clinical approach to understand disease processes. Beginning with an introduction to cell biology, the book continues with an analysis of biomolecule chemistry, molecular biology and metabolism, as well as chapters on diet and nutrition, biochemistry of cancer and AIDS, and environmental biochemistry. Each chapter includes numerous images, multiple choice and essay-style questions, as well as highlighted text to help students remember the key points.

Over the next 2 years around 50 titles will be published, covering a comprehensive range of disciplines within medicine and health sciences. In a handy 152mm x 122mm size, and between 250-350 pages, these pocket atlases will contain up-to-the-minute

information on their subject, which has been compiled, distilled and updated from prior work by each author. Each mini-atlas will also contain a free CD-ROM or DVD-ROM with material to accompany and complement the text. The "Anshan Gold Standard Mini Atlas Series" will appeal to everyone involved in medicine and health sciences, from undergraduates to private practitioners, from medical professionals and academics. The full series will develop into an outstanding resource for any medical library, and each individual title will be a great value-for-money addition to a personal collection, for use as a portable reference for work or home. The first books will publish in February 2007, with a consistent flow of additional titles each month throughout 2007.

Based on BHMS syllabus by CCH. This book deals with the basic knowledge of practical biochemistry but also its application in actual clinical practice. Creates an abiding interest in the practical aspects of the subject.

CD-ROM includes animations, living graphs, biochemistry in 3D structure tutorials.

The third edition of this textbook has been fully revised to provide dental students with the latest information in the field of biochemistry. The comprehensive text is divided into 31 chapters and covers key aspects of biochemistry that students will need to know for examinations, including amino acids, carbohydrates, lipids, metabolism, acid-base balance, dental caries, and much more. The new edition features a question bank of essay type and short note questions based on previous examination papers. The book is highly illustrated with clinical images, tables and boxes, and key points in each chapter are highlighted for quick reference and to assist learning.
