The first comprehensive study of how English is pronounced by different people in different places. It provides an integrated and unified framework for existing scholarly treatments of regional forms of speech and makes many original contributions to the field.

Accents of English is about the way English is pronounced by different people in different places. Volume 1 provides a synthesizing introduction, which shows how accents vary not only geographically, but also with social class, formality, sex and age; and in volumes 2 and 3 the author examines in greater depth the various accents used by people who speak English as their mother tongue: the accents of the regions of England, Wales, Scotland and Ireland (volume 2), and of the USA, Canada, the West Indies, Australia, New Zealand, South Africa, India, Black Africa and the Far East (volume 3). Each volume can be read independently, and together they form a major scholarly survey, of considerable originality, which not only includes descriptions of hitherto neglected accents, but also examines the implications for phonological theory. Readers will find the answers to many questions: Who makes 'good' rhyme with 'mood'? Which accents have no voiced sibilants? How is a Canadian accent different from an American one, a New Zealand one from an Australian one, a Jamaican one from a Barbadian one? What are the historical reasons for British-American pronunciation differences? What sound changes are currently in progress in New York, in London, in Edinburgh? Dr Wells his written principally for students of linguistics, phonetics and English language, but the motivated general reader will also find the study both fascinating and rewarding.

Adopting a central theme of variability, the book explores different aspects of native and non-native accents of English. The dominating perspective is that of a non-native speaker, although - as argued by some contributors - the very distinction between native and non-native English may need to be redefined. As the debate on the pronunciation of English as a lingua franca continues, this volume presents well-focused studies investigating the acquisition and use of the sound system by native and non-native speakers, problems with the choice and variability in pronunciation models and pedagogical aspects of pronunciation instruction. The issue of accents calls for a comprehensive approach; this book aims to provide such a broad perspective, based on expertise and experience of the contributors, who are specialist in linguistics, applied linguistics, phonetics, phonology and ESL. The book is divided into three parts. Part one discusses complex conditioning of production and perception of native and non-native accents. It contains acoustic and auditory studies investigating the effect of such independent variables as identity, L1 or contextual factors on the elements of the sound system. Part two links the accent variability studies to the pedagogical context by presenting problems with the pronunciation model, its choice and variability. The main focus of part three is on pronunciation teaching: papers presented in this section report on the methods and results of phonetic instruction in different settings.

Acheson and Empire offers a compelling reassessment of Dean Acheson's policies toward the former colonial world during his period as secretary of state from 1949 to 1953. John T. McNay argues that Acheson inherited through his own personal history a way of understanding the world that encouraged imperial-style international relationships. This worldview represented a well-developed belief system rooted in his Ulster Protestant heritage that remained consistent throughout his life.

Since its initial publication, English with an Accent has provoked debate and controversy within classrooms through its in-depth scrutiny of American attitudes towards language. Rosina Lippi-Green discusses the ways in which discrimination based on accent functions to support and perpetuate social structures and unequal power relations. This second edition has been reorganized and revised to include: new dedicated chapters on Latino English and Asian American English discussion questions, further reading, and suggested classroom exercises, updated examples from the classroom, the judicial system, the media, and corporate culture a discussion of the long-term implications of the Ebonics debate a brand-new companion website with a glossary of key terms and links to audio, video, and images relevant to the each chapter's content. English with an Accent is essential reading for students with interests in attitudes and discrimination towards language.

English Accents and Dialects is an essential guide to contemporary social and regional varieties of English spoken in the British Isles today. Together with invaluable overviews of numerous regional accents and dialects, this fifth edition provides a detailed description of key features of Received Pronunciation (RP) as well as several major non-standard varieties of English. Key features: main regional differences are followed by a survey of speech in over 20 areas of the UK and Ireland, audio samples of which are available to download at [www.routledge.com/cw/hughes](#) recent findings on London English, Aberdeen English and Liverpool English contains new entries on Hull, Manchester, Carlisle, Middlesbrough, Southampton, London West Indian, Lancashire and the Shetlands additional exercises with answers online accompany the new varieties clear maps throughout for locating particular accents and dialects. This combination of reference manual and practical guide makes this fifth edition of English Accents and Dialects a highly useful resource providing a comprehensive and contemporary coverage of speech in the UK and Ireland today.

This is a unique introductory survey of the main regional and social varieties of English spoken in the British Isles. In the book, the authors discuss accent and dialect in the broader framework of language variation, including phonetic, phonological, grammatical, lexical, historical and stylistic differences. This is followed by a survey of the speech of twelve different areas of the British Isles. The cassette which accompanies the book consists of edited interviews (all transcribed in the book) with speakers from each of the different areas. The third edition has been thoroughly revised and includes an entirely new chapter on Received Pronunciation. The cassette now includes recordings of three different varieties of RP speech. Entirely new sections, with corresponding recordings, have been added on Lowland Scots, Devon and Dublin speech.

Audio recordings of English are available from the first half of the twentieth century and thus complement the written data sources for the recent history of the language. This book is the first to bring together a team of globally recognised scholars to document and analyse these early recordings in a single volume. Looking at examples of regional varieties of English from England, Scotland, Ireland, the USA, Canada and other anglophone countries, the volume explores both standard and vernacular varieties, and demonstrates how accents of English have changed between the late nineteenth century and the present day. The socio-phonetic examinations of the recordings will be of interest to scholars of historical linguistics, the history of the English language, language variation and change, phonetics, and phonology.

Traditional dialects have been encroached upon by the increasing mobility of their speakers and by the onslaught of national languages in education and mass media. Typically, older dialects are "leveling" to become more like national languages. This is regrettable when the last articulate traces of a culture are lost, but it also promotes a complex dynamics of interaction as speakers shift from dialect to standard and to intermediate compromises between the two in their forms of speech. Varieties of speech thus live on in modern communities, where they still function to mark provenance, but increasingly cultural and social provenance as opposed to pure geography. They arise at times from the need to function throughout the different groups in society, but they also may have roots in immigrants' speech, and just as certainly from the ineluctable dynamics of groups wishing to express their identity to themselves and to the world. The future of dialects is a selection of the papers presented at Methods in Dialectology XV, held in Groningen, the Netherlands, 11-15 August 2014. While the focus is on methodology, the volume also includes specialized studies on varieties of Catalan, Breton, Croatian, (Belgian) Dutch, English (in the US, the UK and in Japan), German (including Swiss German), Italian (including Tyrolean Italian), Japanese, and Spanish as well as on heritage languages in Canada.
