"This workbook provides solutions and step-by-step explanations for the odd-numbered exercises in 'Advanced microeconomic theory' (107 problems in total. The answer key and detailed explanations emphasize the economic intuition behind the mathematical assumptions and results." -- Page [4] of cover.

An introduction to advanced topics in microeconomics that emphasizes the intuition behind assumptions and results, providing examples that show how to apply theory to practice. This textbook offers an introduction to advanced microeconomic theory that emphasizes the intuition behind mathematical assumptions, providing step-by-step examples that show how to apply theoretical models. It covers standard topics such as preference relations, demand theory and applications, producer theory, choice under uncertainty, partial and general equilibrium, monopoly, game theory and imperfect competition, externalities and public goods, and contract theory; but its intuitive and application-oriented approach provides students with a bridge to more technical topics. The book can be used by advanced undergraduates as well as Masters students in economics, finance, and public policy, and by PhD students in programs with an applied focus. The text connects each topic with recent findings in behavioral and experimental economics, and discusses these results in context, within the appropriate chapter. Step-by-step examples appear immediately after the main theoretical findings, and end-of chapter exercises help students understand how to approach similar exercises on their own. An appendix reviews basic mathematical concepts. A separate workbook, Practice Exercises for Advanced Microeconomic Theory, offers solutions to selected problems with detailed explanations. The textbook and workbook together help students improve both their theoretical and practical preparation in advanced microeconomics.

This advanced economics text bridges the gap between familiarity with microeconomic theory and a solid grasp of the principles and methods of modern neoclassical microeconomic theory.

Devoted to modern consumer and producer theories. Examines the behavior of economic agents when they come together on market. Provides strategic behavior.

A short, rigorous introduction to intermediate microeconomic theory that offers worked-out examples, tools for solving exercises, and algebra support. This book takes a concise, example-filled approach to intermediate microeconomic theory. It avoids lengthy conceptual description and focuses on worked-out examples and step-by-step solutions. Each chapter presents the basic theoretical elements, reducing them to their main ingredients, and offering several worked-out examples and applications as well as the intuition behind each mathematical assumption and result. The book provides step-by-step tools for solving standard exercises, offering students a common approach for solving similar problems. The book walks readers through each algebra step and calculation, so only a basic background in algebra and calculus is assumed. The book includes 140 self-assessment exercises, giving students an opportunity to apply concepts from previous worked-out examples.

Preface -- Preferences and utility -- Demand theory -- Demand theory : applications -- Production theory -- Choice under uncertainty -- Partial and general equilibrium -- Monopoly -- Imperfect competition -- Externalities and public goods -- Contract theory -- Notes -- Index

Detailed answer keys to all 140 self-assessment exercises and solutions to the 173 odd-numbered end-of-chapter exercises in Intermediate Microeconomic Theory. This book accompanies Ana Espinola-Arredondo and Felix Muñoz-García's Intermediate Microeconomic Theory: Tools and Step-by-Step Examples, offering detailed answer keys to all 140 self-assessment exercises and solutions to the 173 odd-numbered end-of-chapter exercises. It provides readable step-by-step explanations and algebra support, enabling students to approach similar exercises on their own, emphasizing the economic intuition behind mathematical results.

Models in Microeconomic Theory covers basic models in current microeconomic theory. Part I (Chapters 1-7) presents models of an economic agent, discussing abstract models of preferences, choice, and decision making under uncertainty, before turning to models of the consumer, the producer, and monopoly. Part II (Chapters 8-14) introduces the concept of equilibrium, beginning, unconventionally, with the models of the jungle and an economy with indivisible goods, and continuing with models of an exchange economy, equilibrium with rational expectations, and an economy with asymmetric information. Part III (Chapters 15-16) provides an introduction to game theory, covering strategic and extensive games and the concepts of Nash equilibrium and subgame perfect equilibrium. Part IV (Chapters 17-20) gives a taste of the topics of mechanism design, matching, the axiomatic analysis of economic systems, and social choice. The book focuses on the concepts of model and equilibrium. It states models and results precisely, and provides proofs for all results. It uses only elementary mathematics (with almost no calculus), although many of the proofs involve sustained logical arguments. It includes about 150 exercises. With its formal but accessible style, this textbook is designed for undergraduate students of microeconomics at intermediate and advanced levels.

A Solutions Manual, containing solutions to all end-of chapter questions for MICROECONOMIC THEORY by Mas-Colell, Whinston and Green. It is supplied only to those who are adopting the text, and is free.
