Captain Vriesenga presents a compilation of essays by 34 participants below the rank of major who contributed to the Gulf War. Their stories focus on such topics as deployment, organizational patterns of units, delegation of authority and responsibility, emotions and psychology of combat, the impact of combat losses, airfield construction, medical care, and aircraft preparations.

Forging the Shield by author Donald A. Carter, tells the story of U.S. Army forces in Europe during the 1950s and early 1960s. It spans the period between the return of major U.S. combat forces to Germany in 1951 and the aftermath of the Berlin crisis in 1961-1962. During that time, the troops in Europe became the public face of the Army to Americans as well as to the rest of the world. The service directed almost all of its training, equipment and force development toward that potential day when its troops would face Soviet divisions streaming through the Fulda Gap and into Germany. The establishment of a credible conventional deterrent in Germany, backed up with nuclear forces, was one of the central linchpins of the U.S. strategy of containment of Soviet power. This important volume tells the story of the U.S. Army in the early days of the Cold War as our commitment evolved into the multigenerational defense of Europe and the values of freedom.

Global value chains (GVCs) have been a feature of the international economic architecture for many years, but scholarly interest in the phenomenon is more recent. Today that interest is intense, emanating from an array of academic disciplines as well as from the policy world. The literature that attempts to understand and explain GVCs is vast, multidisciplinary and no less complex than the phenomenon itself. This volume, jointly produced by the Fung Global Institute and the World Trade Organization, is an attempt to capture the core features and themes of the exploding literature on GVCs. Contents Part I. Supply Chain Perspectives 1. Supply chains in the economics literature 2. Supply chains in the business literature Part II. Supply Chain Issues 3. Supply chains and offshoring 4. Supply chains, upgrading and development 5. Supply chains and risk 6. Supply chains and SMEs 7. Supply chains and services 8. Supply chains and trade in value-added 9. The diary and essays of Brian Eno republished twenty-five years on with a new introduction by the artist in a beautiful hardback edition. 'A cranium tour of one of the most creative minds of our age . . . [Eno] delivers razor-sharp commentary with devilish snarkiness and brutal honesty.' *Wired* At the end of 1994, Brian Eno resolved to keep a diary. His plans to go to the cinema, theatre and galleries fell quickly to the wayside. What he did do - and write - however, was astonishing: ruminations on his collaborative work with David Bowie, U2, James and Jah Wobble, interspersed with correspondence and essays dating back to 1978. These 'appendices' covered topics from the generative and ambient music Eno pioneered to what he believed the role of an artist and their art to be, alongside adroit commentary on quotidian tribulations and happenings around the world. An intimate insight into one of the most influential creative artists of our time, *A Year with Swollen Appendices* is an essential classic.

This is the Final Report of Canada's Truth and Reconciliation Commission and its six-year investigation of the residential school system for Aboriginal youth and the legacy of these schools. This report, the summary volume, includes the history of residential schools, the legacy of that school system, and the full text of the Commission's 94 recommendations for action to address that legacy. This report lays bare a part of Canada's history that until recently was little-known to most non-Aboriginal Canadians. The Commission discusses the logic of the colonization of Canada's territories, and why and how policy and practice developed to end the existence of distinct societies of Aboriginal peoples. Using brief excerpts from the powerful testimony heard from Survivors, this report documents the residential school system which forced children into institutions where they were forbidden to speak their language, required to discard their clothing in favour of institutional wear, given inadequate food, housed in inferior and fire-prone buildings, required to work when they should have been studying, and subjected to emotional, psychological and often physical abuse. In this setting, cruel punishments were all too common, as was sexual abuse. More than 30,000 Survivors have been compensated financially by the Government of Canada for their experiences in residential schools, but the legacy of this experience is ongoing today. This report explains the links to high rates of Aboriginal children being taken from their families, abuse of drugs and alcohol, and high rates of suicide. The report documents the drastic decline in the presence of Aboriginal languages, even as Survivors and others work to maintain their distinctive cultures, traditions, and governance. The report offers 94 calls to action on the part of governments, churches, public institutions and non-Aboriginal Canadians as a path to meaningful reconciliation of Canada today with Aboriginal citizens. Even though the historical experience of residential schools constituted an act of cultural genocide by Canadian government authorities, the United Nation's declaration of the rights of aboriginal

peoples and the specific recommendations of the Commission offer a path to move from apology for these events to true reconciliation that can be embraced by all Canadians.

The international financial value of Grand Prix racing has grown substantially in recent years. This book will focus upon the massive size, value, importance and impact of the industry. It will also investigate the dominance of UK based Research and Development and design and the development of team strategy and tactics. The authors have based their analysis upon very up-to-date research involving interviews with key individuals at the highest level and visibility within the industry and focus upon the key management themes of teamworking, leadership, strategy and innovation.

The motor vehicle technology covered in this book has become in the more than 125 years of its history in many aspects an extremely complex and, in many areas of engineering science . Motor vehicles must remain functional under harsh environmental conditions and extreme continuous loads and must also be reliably brought into a safe state even in the event of a failure by a few trained operators. The automobile is at the same time a mass product, which must be produced in millions of pieces and at extremely low cost. In addition to the fundamentals of current vehicle systems, the book also provides an overview of future developments such as, for example, in the areas of electromobility, alternative drives and driver assistance systems. The basis for the book is a series of lectures on automotive engineering, which has been offered by the first-named author at the University of Duisburg-Essen for many years. Starting from classical systems in the automobile, the reader is given a systemic view of modern motor vehicles. In addition to the pure basic function, the modeling of individual (sub-) systems is also discussed. This gives the reader a deep understanding of the underlying principles. In addition, the book with the given models provides a basis for the practical application in the area of simulation technology and thus achieves a clear added value against books, which merely explain the function of a system without entering into the modeling. On the basis of today's vehicle systems we will continue to look at current and future systems. In addition to the state-of-the-art, the reader is thus taught which topics are currently dominant in research and which developments can be expected for the future. In particular, a large number of practical examples are provided directly from the vehicle industry. Especially for students of vehicle-oriented study courses and lectures, the book thus enables an optimal preparation for possible future fields of activity.

The aim of this book is to link demand and supply of environmental information in the field of Life Cycle Management. The book is based on the results of the CHAINET concerted action financed by EU-DGXII for the work period 1998-2000, and is intended to build bridges between the different scientific communities in the field of Life Cycle Management. A structured approach is followed, meaning that both demand and supply of environmental information are characterised, after which the two are linked.

The evidence in this book may not ultimately give you the “ smoking gun ” you are looking for on your journey, but I guarantee it will give you a box of bullets when you find it. In 1996, John Greenwald, Jr. began researching the secret inner workings of the U.S. Government at the age of fifteen. He targeted such agencies as the CIA, FBI, Pentagon, Air Force, Army, Navy, NSA, DIA, and countless others. Greenwald utilized the Freedom of Information Act (FOIA) to gain access to more than two million pages of documents. This archive includes information relating to UFOs, the JFK Assassination, chemical, biological, and nuclear weapons, and top secret aircraft. He took the millions of pages, and over the course of more than two decades, has built an archive known around the world, as The Black Vault. Inside The Black Vault: The

Government ' s UFO Secrets Revealed takes you on a journey within the secret world of unidentified aerial phenomenon that has plagued the military since at least the 1940s. Declassified records prove that the UFO topic is one of the most highly classified and most elusive subjects the U.S. Government has ever dealt with. Each chapter explores various agencies and their documents, and Greenewald breaks down the meaning of why some of the most important documents are relevant to proving a massive cover-up. Along with declassified documents, Greenewald outlines the struggle it took him to get them. No other topic has proven so difficult, in more than 8,000 FOIA requests that he has filed. He explores why that might be and meets skeptics and debunkers head on, outlining why some of their more prominent rebuttals for it all cannot be true.

This book outlines the effects that technology-induced change will have on sport within the next five to ten years, and provides food for thought concerning what lies further ahead. Presented as a collection of essays, the authors are leading academics from renowned institutions such as Massachusetts Institute of Technology, Queensland University of Technology, and the University of Cambridge, and practitioners with extensive technological expertise. In their essays, the authors examine the impacts of emerging technologies like artificial intelligence, the Internet of Things, and robotics on sports and assess how they will change sport itself, consumer behavior, and existing business models. The book will help athletes, entrepreneurs, and innovators working in the sports industry to spot trendsetting technologies, gain deeper insights into how they will affect their activities, and identify the most effective responses to stay ahead of the competition both on and off the pitch.
