These include a halt in preventive programs, such as cancer screenings, declining health among Indigenous and aging people and for those with ... Many ITMDs possess much-needed cultural diversity, ...

As the older population in the United States is becoming more racially and ethnically diverse, it is important to understand the characteristics, the potential, and the needs of this population. In this new and fully revised edition of Aging and Diversity, Chandra Mehrotra and Lisa Wagner address key topics in diversity and aging, discussing how the aging experience is affected by not only race and ethnicity but also gender, religious affiliation, social class, rural-urban community location, and sexual orientation and gender identity. Taking this broad view of human diversity allows the authors to convey some of the rich complexities facing our aging population – complexities that provide both challenges to meet the needs of a diverse population of elders and opportunities to learn how to live in a pluralistic society. Mehrotra and Wagner present up-to-date knowledge and scholarship about aging and diversity in a way that engages readers in active learning, placing ongoing emphasis on developing readers' knowledge and skills, fostering higher order thinking, and encouraging exploration of personal values and attitudes.

This new edition has been completely rewritten and includes chapters that address key topics in diversity and aging: research methods, psychological aging; health beliefs, behaviors, and services; health disparities; informal and formal care for older persons; work and retirement; religious affiliation and spirituality; and death, dying, and bereavement. Taking a broad view of diversity, Mehrotra and Wagner discuss elements of diversity such as gender, race or ethnicity, religious affiliation, social class, rural-urban community location and sexual orientation. Including these elements allows them to convey some of the rich complexities of our diverse culture - complexities that provide both challenges to meet the needs of diverse population and opportunities to learn how to live in a pluralistic society. Throughout the book, Mehrotra and Wagner present up-to-date knowledge and scholarship in a way that engages readers in active learning. Rather than simply transmitting information, the authors place ongoing emphasis on developing readers' knowledge and skills; fostering higher order thinking and encouraging exploration of personal values and attitudes. Distinctive features of the book include: Opening vignettes for each chapter that present a sampling of how the issues to be discussed apply to diverse elders. Active learning experiences that invite readers to interview diverse elders, conduct internet searches, and give an analysis of a case study. Quizzes at the end of the chapters help readers ascertain the extent to which they have learned the material; the key for each quiz includes details about correct and incorrect responses so that additional learning can occur. Aging and Diversity Online boxes interspersed throughout the book provide internet resources that readers may use to find new research and publications. Suggested readings and audiovisual resources given at the end of each chapter serve as a guide to additional information on topics covered in the chapter. This approach of presenting the material will help the readers understand and apply key concepts and principles in ways that will not only improve the lives of older people they serve, but will also enhance their own aging experience.

Specific chapters address psychological aging, issues in health and sexuality, caregiving, work and retirement, religion and spirituality, and death and grieving. For ease of use, each chapter includes orienting questions, a narrative that includes an introduction and summary, vignettes, structured individual and group learning experiences, comprehension tests, quizzes, glossary, and an annotated bibliography of suggested readings. Aging and Diversity offers undergraduates and service providers tools that will enable them to understand diversity and its impact on the lives of older adults in the United States. Aging and Diversity will be invaluable to both students and practitioners in the fields of gerontology, psychology and sociology of aging, counseling, adult learning, social work, family studies, and multicultural studies.

Today, nearly one of every eight Americans is 65 or older, and by 2030, over 20% of the population will be in this age group. Are you prepared to work with this vastly diverse—and rapidly growing—population? This single source is designed to help social service professionals provide effective services to America's vastly diverse and rapidly growing elderly population. Diversity and Aging in the Social Environment explores the impact of race/ethnicity, gender, sexual orientation, and geographic location on elders' strengths, challenges, needs, and resources to provide you with a more complete understanding of the issues elders face. In order to be more responsive to older adults, social workers and other human service professionals need to enhance their knowledge of the aging population and the factors that impact the way seniors interact with society, organizations, community resources, neighborhoods, support networks, kinship groups, family, and friends. Diversity and Aging in the Social Environment examines differences in race, ethnicity, geographical location, sexual orientation, religion, and health status to help current and future human service professionals provide culturally competent services to the diverse range of elderly people they serve. In addition, it addresses the wide disparity that exists for older Americans in terms of income and assets, number of chronic conditions, functional and cognitive impairment, housing arrangements, and access to health care. This book provides a context for the examination of diversity issues among older adults by describing and discussing several theoretical perspectives on aging that highlight important aspects of diversity. Next, you'll find thoughtful examinations of: issues and challenges faced by lesbian, gay, bisexual, and transgender elders—and the strengths they bring into later life the impact of gender, race, and sexual orientation on prevalence rates, risk factors, methods of disease contraction, and mortality rates among older adults with HIV/AIDS—along with a discussion of the psychosocial issues they face diverse characteristics of custodial grandparents—and the influence of the caregivers' gender, race, age, and geographic location on methods of care and available caregiver support differences in caregiver characteristics, service utilization, caregiver strain, and coping mechanisms among several racial/ethnic groups of adults who care for elderly, disabled, and ill persons cultural/religious factors that influence interactions between health care personnel and Japanese-American elders the relationship between acculturation and depressive symptoms among Mexican-American couples life challenges facing Jewish and African-American elders—with a look at each group's coping mechanisms differences in religious/spiritual coping skills among Native American, African-American, and white elders psychological well-being and religiosity among a diverse group of rural elders

The challenge of population aging requires innovative approaches to meet the needs of increasing numbers of older people. Emerging information and communication technologies (ICTs), such as pervasive computing and ambient assistive technology, have considerable potential for enhancing the quality of life of many older people by providing additional safety and security while also supporting mobility, independent living, and social participation. The proposed book will be a landmark publication in the area of technology and aging that will serve as a statement of the current state-of-the-art and as a pointer to directions for future research and emerging technologies, products, and services.

Aging is a process that encompasses virtually all aspects of life. Because the speed of population aging is accelerating, and because the data needed to study the aging process are complex and expensive to obtain, it is imperative that countries coordinate their research efforts to reap the most benefits from this important information. Preparing for an Aging World looks at the behavioral and socioeconomic aspects of aging, and focuses on work, retirement, and pensions; health and savings behavior; health and disability; intergenerational transfers; and concepts of well-being. It makes recommendations for a collection of new, cross-national data on aging populationsâ€ˆdata that will allow nations to develop policies and programs for addressing the major shifts in population age structure now occurring. These efforts, if made internationally, would advance our understanding of the aging process around the world.

Aging well and continuing to be active are often regarded as THE goals in life, from individual, family, community, and population perspectives. This implies good health and physical fitness, good cognitive and positive emotional-motivational functioning, and social participation and engagement.Increasing life expectancy by means of biomedical advances is not on its own enough, however. Research shows that an individual's psychological condition contributes to their quality of life and well-being in old age – and that behavioral and psychological interventions can also prevent illness, improve cognitive and physical fitness, and increase positive emotional functioning and social participation.This book shows how psychologists and psychological science as a whole can face the challenge of promoting optimal and active aging in a society that is growing ever older.

The president of New York's Mount Sinai Hospital and a professor of public health present the findings of a MacArthur Foundation study showing that healthy aging is dependent on diet, exercise, and self-esteem rather than genes

The demographic phenomena of increased life expectancy, increasing global population of older adults, and a larger number of older people as a proportion of the total population in nations throughout the world will affect our lives and the life of each person we know. The changes will result in challenges and benefits for societies and people of all ages. These events need to be understood, explained, and their consequences addressed; sociological theories about aging are an essential part of this process. In *Understanding Aging and Diversity: Theories and Concepts*, Patricia Kolb presents important sociological theories and concepts for understanding experiences of older people and their families in a rapidly changing world. She explores concepts from phenomenology, critical theory, feminist theory, life course theory and gerotranscendence theory to explain important issues in the lives of older people. This book investigates similarities and differences in aging experiences, focusing in particular on the effects of inequality. Kolb examines the relationship of ethnicity, race, gender, sexual orientation and social class to international aging experiences. This book explores the relationships between older people and social systems in different ways, and informs thinking about policy development and other strategies for enhancing the wellbeing of older adults. It will be useful for students and scholars of sociology, gerontology, social work, anthropology, economics, demography and global studies.
