through product manufacture and service delivery. It begins with an introductory section that explores the meaning of quality before moving on to review the principles in quality strategy and policy management. The book then provides a detailed discussion of customer needs and corresponding quality planning tasks in design phases, and then focuses on the design processes to ensure product or service quality. Later chapters are dedicated to failure modes and effects analysis (FMEA) and control plan as proactive approaches for quality management, supplier quality management, and four key processes associated with quality planning and execution. The final chapter provides a comprehensive review on problem-solving processes, basic seven quality tools, and additional seven tools in three sections.

With a detailed discussion on the preparation and tools needed for an automotive process audit, this book addresses the fundamental issues and concerns by focusing on two objectives: explaining the methods and tools used in the process for the organization, and provide a reference or manual for dealing with documenting quality issues. This book addresses the fundamental issues and concerns for a successful automotive process audit and details specifically how to prepare for it. It presents a complete assessment of what an organization must do to earn certification in ISO standards, industry standards, and customer-specific requirements. It also focuses on the efficiency of resources within an organization so that an audit can be successful and describes the methodologies to optimize the process by knowing what to do, what to say, and how to prove it. A road map is offered for the "process audit" and the "layered audit,"

and defines a clear distinction between the preparation details for each. This book is intended for those that conduct audits, those who are interested in auditing, and those who are being audited. It specifically addresses how to prepare for an automotive process audit for readers who are involved in quality, manufacturing, and operations management, and those who work with suppliers.
