What began as an academic initiative to improve the quality of life of poor strata of the population has meanwhile become a professional "do tank" offering services that cover the entire spectrum of urban development. Alejandro Aravena (*1967 in Santiago de Chile) founded Elemental in 2001 in his hometown with the goal of alleviating social deprivation directly instead of hoping for a balance of income relations. Besides building public facilities and public housing, Elemental also develops new approaches for the reorganization of resources and the potential of cities by means of projects devoted to infrastructure and transportation. This publication documents the social activity and history of the international architectural team and sheds light on its financing strategies, for example through participative building. 15th International Architecture Exhibition, Venice, May 28-November 27, 2016

Elemental is an initiative creating innovative solutions for subsidized housing. The programs urban projects aim to improve social housing for poverty stricken families. Elemental organized an international architecture competition which resulted in 7 constructed projects throughout Chile as hybrids between house and building, pushing the limits of expansion and density. Built in central areas, these houses are half-constructed, offering the inhabitants the infrastructure to extend the house to personal needs. This book is a fascinating study of the successes and failures of the "Element Houses."ELEMENTAL is a Do Tank affiliated with the Pontificia Universidad Catlica de Chile and COPEC, implementing urban projects for social interest and public impact.

An award-winning curator and editor of Icon magazine chronicles his travels through Latin America in search of urban design activists, citing the examples of visionaries who are revolutionizing social housing, public architecture and community development.

Sprawling beneath the Acropolis, modern Athens is commonly viewed in negative terms: congested, ugly and monotonous. A Mediterranean version of "informal" urbanism prevalent throughout the so-called developing world, Builders, Housewives and the Construction of Modern Athens reassesses the explosive growth of post-war Athens through its most distinctive building type, the polykatoikia, a small-scale multi-storey apartment block (from poly meaning "multiple" and oikos meaning "house"). Theocharopoulou re-evaluates the polykatoikia as a low-tech, easily constructible innovation that stimulated the post-war urban economy, triggering the city's social mid-twentieth century transformation, enabling the migrants who poured into Athens to become urban citizens, aspiring to a modern life. The interiors of the polykatoikia apartments reflect a desire for modernity as marketed to housewives through film and magazines. Regular builders became unlikely allies in designing these polykatoikia interiors, enabling inhabitants to exert agency over their daily lives --and the shape of the post-war city. Theocharopoulou's reading draws on popular media as well as urban and regional planning theory, cultural studies and anthropology to examine the evolution of this phenomenon and, in light of Greece's recent financial crisis, considers the role polykatoikia might play in building an equitable and sustainable twenty-first-century city.

How climate influenced the design strategies of modernist architects Modern Architecture and Climate explores how leading architects of the twentieth century incorporated climate-mediating strategies into their designs, and shows how regional approaches to climate adaptability were essential to the development of modern architecture. Focusing on the period surrounding World War II—before fossil-fuel powered air-conditioning became widely available—Daniel Barber brings to light a vibrant and dynamic architectural discussion involving design, materials, and shading systems as means of interior climate control. He looks at projects by well-known architects such as Richard Neutra, Le Corbusier, L ú cio Costa, Mies van der Rohe, and Skidmore, Owings, and Merrill, and the work of climate-focused architects such as MMM Roberto, Olgay and Olgay, and Cliff May. Drawing on the editorial projects of James Marston Fitch, Elizabeth Gordon, and others, he demonstrates how images and diagrams produced by architects helped conceptualize climate knowledge, alongside the work of meteorologists, physicists, engineers, and social scientists. Barber describes how this novel type of environmental media catalyzed new ways of thinking about climate and architectural design. Extensively illustrated with archival material, Modern Architecture and Climate provides global perspectives on modern architecture and its evolving relationship with a changing climate, showcasing designs from Latin America, Europe, the United States, the Middle East, and Africa. This timely and important book reconciles the cultural dynamism of architecture with the material realities of ever-increasing carbon emissions from the mechanical cooling systems of buildings, and offers a historical foundation for today ' s zero-carbon design.

The International Building Exhibition 1984/87 in Berlin constitutes one of the most remarkable examples to discuss "open architecture". Almost 10,000 dwellings were constructed or restored in the Kreuzberg districts adjacent to the Berlin Wall, inhabited about halfway by immigrants. The renowned author Esra Akcan, related in many ways to Turkey, Berlin and the USA, narrates the history and reverberations of this architectural-political event.

Why Architecture Matters is not a work of architectural history or a guide to the styles or an architectural dictionary, though it contains elements of all three. The purpose of Why Architecture Matters is to come to grips with how things feel to us when we stand before them, with how architecture affects us emotionally as well as intellectually--with its impact on our lives. Architecture begins to matter, writes Paul Goldberger, when it brings delight and sadness and perplexity and awe along with a roof over our heads. He shows us how that works in examples ranging from a small Cape Cod cottage to the vast, flowing Prairie houses of Frank Lloyd Wright, from the Lincoln Memorial to the highly sculptural Guggenheim Bilbao and the Church of Sant'Ivo in Rome, where simple geometries . . . create a work of architecture that embraces the deepest complexities of human imagination. Based on decades of looking at buildings and thinking about how we experience them, the distinguished critic raises our awareness of fundamental things like proportion, scale, space, texture, materials, shapes, light, and memory. Upon completing this remarkable architectural journey, readers will enjoy a wonderfully rewarding new way of seeing and experiencing every aspect of the built world.
