Advanced statistics and new terminology have taken hold of baseball today, but do they accurately reflect the reality of the game? A baseball lifer states his case. America ' s favorite pastime is enduring an assault of new thoughts and ideas. In recent years, the sabermetrics and analytics craze has infiltrated Major League Baseball—from its front offices to dugouts to clubhouses to media covering both, inciting a baseball culture war. New phrases like " launch angle, " " spin rate, " and " pitch framing " have entered the vocabulary, often with little real meaning when it comes to how the game is actually played on the field. No more. In State of Play, twelve-year Major League veteran, Emmy Award-winning MLB Network analyst, and bestselling author Bill Ripken breaks down these modern statistical methods to explain which ones make sense in the game ' s historical context, bringing them together with proven old-school strategies. He simplifies those sabermetric terms hastily added to the baseball lexicon without being fully realized, taking new-school confusion out of old-school baseball ' s tried-and-true common sense. In the end, he unites the teachings of each school to show fans of both how to listen to and understand the game as it ' s played today and how it should be played moving forward. From a true baseball lifer and member of baseball ' s first family, State of Play offers a fascinating insider ' s look at how to reconcile years of historical tradition with the rules and trends of the new millennium. As Ripken sees it: the game inside the game cannot be measured by a spreadsheet—but it can be measured by a qualified, crusty baseball man. Play ball.

This book constitutes the refereed proceedings of the 21st International Symposium on Research in Attacks, Intrusions, and Defenses, RAID 2018, held in Heraklion, Crete, Greece, in September 2018. The 32 revised full papers were carefully reviewed and selected from 145 submissions. They are organized in the following topical sections: attacks; intrusion detection and prevention; DDoS attacks; passwords, accounts, and users; machine learning for computer security; hardware-assisted security; software security; malware, IoT/CPS security; security measurements; and defenses.

The Design and Implementation of Modern Column-Oriented Database Systems discusses modern column-stores, their architecture and evolution as well the benefits they can bring in data analytics.

Viruses in the Parvoviridae family constitute one of the most diverse and intriguing fields of research. While they all share an ssDNA genome and a small capsid, they can differ widely in structure, genome organization and expression, virus–cell interaction, and impact on the host. Exploring such diversity and unraveling the inherent complexity in these apparently simple viruses is an ongoing endeavor and commitment for the scientific community. The translational implications of research on parvoviruses are relevant. Within the family, some viruses are important human and veterinary pathogens, in need of diagnostic methods and antiviral strategies; other viruses have long been studied and engineered as tools for oncolytic therapy, or as sophisticated gene delivery vectors, and can now display their wide and expanding applicative potential. This Special Issue of Viruses collects recent contributions in the field of parvovirus research, with a focus on new insights and research on unresolved issues, as well as new approaches exploiting systemic methodologies. Evolution, structural biology, viral replication, virus–host interaction, pathogenesis and immunity, and viral oncotherapy are a selection of the topics addressed in the issue that can be of relevance to the community involved in parvovirus research and of interest to a wider audience.

"Infectious Microecology: Theory and Applications" firstly introduces microecology in the study of infection and proposes new anti-infection methods and strategies and then provides a comprehensive and up-to-date overview of research on infectious microecology. It concludes with a new theory for studying infectious diseases. This book presents the basic theories and fundamentals of infectious microecology, covering all the microecological systems relevant to clinical work. It also describes a new strategy and method to combat infectious diseases and provides detailed descriptions of studies and techniques in infectious microecology. The book discusses utilizing 10 years ' worth of research and clinical practice, referring to recent literature on the relationship between infection and microecology and combined with the latest research findings on liver microecology. In addition, it outlines the latest advances in the theory and techniques in the field of infectious microecology. It is intended for doctors, researchers and graduate students in the fields of infectious disease and microecology. Dr. Lanjuan Li is member of the Chinese Academy of Engineering, she is also a Professor and Chief Physician at Zhejiang University, China.

The past decade has seen tremendous interest in the production and refinement of unmanned aerial vehicles, both fixed-wing, such as airplanes and rotary-wing, such as helicopters and vertical takeoff and landing vehicles. This book provides a diversified survey of research and development on small and miniature unmanned aerial vehicles of both fixed and rotary wing designs. From historical background to proposed new applications, this is the most comprehensive reference yet.

This book provides information on a wide variety of issues ranging from genetics to clinical description of the syndromes, genetic testing and counseling, and clinical management including surveillance, surgical and prophylactic interventions, and chemoprevention. Moreover, current hot issues, such as the identification of novel causal genes and the challenges we face, and the relevance of cancer risk modifiers, both genetic and environmental, are also discussed. This reference book is great for geneticists, oncologists, genetic counselors, researchers, clinicians, surgeons and nurses dedicated to, or interested in, hereditary cancer. The best and most recognized experts in the field have contributed to this project, guaranteeing updated information, accuracy and the discussion of topical issues.

In this volume, the issue of recursion is tackled from a variety of angles. Some articles cover formal issues regarding the proper characterization or definition of recursion, while others focus on empirical issues by examining the kinds of structure in languages that suggest recursive mechanism in the grammar. Most articles discuss syntactic phenomena, but several involve morphology, the lexicon and phonology. In addition, we find discussions that involve evolutionary notions and language disorders, and the broader cognitive context of recursion.

This Special Issue of International Journal of Molecular Sciences (IJMS) is dedicated to the mechanisms mediated at the molecular and cellular levels in response to adverse genomic perturbations and DNA replication stress. The relevant proteins and processes play paramount roles in nucleic acid transactions to maintain genomic stability and cellular homeostasis. A total of 18 articles are presented which encompass a broad range of highly relevant topics in genome biology. These include replication fork dynamics, DNA repair processes, DNA damage signaling and cell cycle control, cancer biology, epigenetics, cellular senescence, neurodegeneration, and aging. As Guest Editor for this IJMS
