Graphing Linear

Equations Answers To

Access PDF Answers To Graphing Linear Equations

When an equation is written in general form it is easier to graph the equation by finding the intercepts.

Step 1: Find the x-intercept, let $y = 0$ then substitute 0 for y in the equation and solve for x . Step 2: Find the y-intercept, let $x = 0$ then

Equations

A linear equation is in the form $y = mx + b$.

This is called the y-intercept form, and it's probably the easiest form to use to graph linear equations. The values in the equation do not need to be whole numbers. Often you'll see an equation that looks like this: $y = \frac{1}{4}x + 5$, where $\frac{1}{4}$

know that the linear equation is defined as an algebraic equation in which each term should have an exponents value of 1.

The graph of the linear equation will always result in a straight line. One such example of a linear equation is $y = mx + b$.
