While battery capacity is often insufficient to keep up with the power-demanding features of the latest mobile devices, powering the functional advancement of wireless devices requires a revolution in the concept of battery life and recharge capability. Future handheld devices and wireless networks should be able to recharge themselves automaticall

This volume of The Circuits and Filters Handbook, Third Edition focuses on computer aided design and design automation. In the first part of the book, international contributors address topics such as the

modeling of circuit performances, symbolic analysis methods, numerical analysis methods, design by optimization, statistical design optimization, and physical design automation. In the second half of the text, they turn their attention to RF CAD, high performance simulation, formal verification, RTK behavioral synthesis, system-level design, an Internet-based micro-electronic design automation framework, performance modeling, and embedded computing systems design.

Fabless (no fabrication) IC (integrated circuit) techniques are growing rapidly and promise to become the standard method of IC manufacturing in the near future, this book will provide readers with what will soon be required knowledge of the subject. Other books on IC fabrication deal with the strictly physical process aspects of the topic and assume all factors in IC fabrication are under the control of the IC designing company. By contrast, this title recognizing that fabless IC design is often as much about managing business relationships as it is about physical processes. "Fabless ICs are those designed and marketed by one company but actually manufactured by another. *Written by board members of the Fabless Semiconductor Association, an industry consortium that include Xilinx, Intersil, Micro Linear, and many other members *Appropriate for a wide range of integrated circuit (IC) designers and users who need to understand the fabless process and its advantages/limitations *Discusses important topics such as negotiating with outside fabrication companies, choosing the right electronic design tools, protection of intellectual property and business plans, and maintaining quality control

Annotation Fifty-one papers and 21 posters from the March 2002 symposium report current research in deep submicron integrated circuit design and development. The sessions address interconnect extraction and modeling, design for process variations, metrics, power and noise management, verification, signal integrity, and low power design techniques. Some of the topics are transition aware global signaling (TAGS), the interoperability of EDA tools for sequential logic synthesis, statistical methods for the determination of process corners, power supply noise suppression via clock skew scheduling, and the relation between SAT and BDDs for equivalence checking. No subject index. Annotation copyrighted by Book News Inc., Portland, OR.

This is a step by step practical guide for developing web services using Apache Axis2. There are lot of real-life examples, which makes this book a good learning material. This book is for Java developers who are interested in building web services using Apache Axis2. The book presumes that you are familiar with web standards like SOAP, WSDL and XML parsing.

* No other blog book gives professional quality information on blog design and development like this one. Others are either "dummies" style books, or are aimed more at understanding the community/theory. * The Book supports 4 of the most popular blog engines, and shows you how to build your own. * It's written by a team of well respected community figures
