App Inventor 2 con database MySQL e una guida passo-passo per scrivere applicazioni Android che utilizzano database MySQL residenti in Internet. Il compito è svolto in sinergia fra i componenti Web, WebWevier e Sharing di App Inventor e database MySQL. La trasmissione dati fra App Android e database MySQL è realizzata mediante interfaccia php appositamente scritta. Con questo metodo, App Android assemblate con App Inventor possono condividere un database su server remoto il cui contenuto è possibile aggiornare utilizzando

semplicemente un browser web. Cio significa che e possibile distribuire App il cui contenuto puo cambiare nel corso del tempo, semplicemente cambiando i dati nel database. Le azioni consentite con i dati sono: memorizzazione, modifica, cancellazione, ordinamento, recupero con criteri di selezione e trasferimento dal database MySQL remoto al dispositivo mobile Android. I dati importati possono poi essere condivisi dal componente Sharing. Alla richiesta di condivisione viene presentata una lista delle App installate sul dispositivo Android fra quelle che possono gestire

TinyDB stores data on your smart phone or tablet and is a primary way for App Inventor apps to save data, even when the app is no longer running or if the device is turned off.

TinyWebDB is similar to TinyDB, but stores your data on a remote server in the network cloud. Multiple apps can share a TinyWebDB database, plus you can update the content of your TinyWebDB using just a web

browser. This means you can distribute an app whose content can change over time - just by changing the values in TinyWebDB. A big challenge is the need to set up a TinyWebDB server - this book shows how to do that through free services offered by Google. Fusion Tables provide a powerful, cloud-based database system for App Inventor apps. Creating, retrieving, updating and deleting data is done using the industry standard Structured Query Language or SQL. Fusion Tables reside in the Google network cloud - this book shows you how to set up and configure Fusion Tables for

you own apps using free services of Google. As your app requirements grow, Google's cloud can provide low cost servers and bandwidth for your needs. Underneath the Android OS user interface, there is a file system, similar to the file system found on Windows or Mac OS X. With App Inventor your apps can write and read data from files, and if using the special "CSV" format, App Inventor data can be shared with many spreadsheet programs. This book shows you how to create, use and access data files, and how to convert data to and from the CSV format. Over 28,000 words.

The perimeter defenses  
guarding your network  
perhaps are not as secure as  
you think. Hosts behind the  
firewall have no defenses of  
their own, so when a host in  
the "trusted" zone is  
breached, access to your  
data center is not far  
behind. That's an all-too-  
familiar scenario today.  
With this practical book,

you'll learn the principles behind zero trust architecture, along with details necessary to implement it. The Zero Trust Model treats all hosts as if they're internet-facing, and considers the entire network to be compromised and hostile. By taking this approach, you'll focus on building strong authentication, authorization, and encryption throughout, while providing compartmentalized access and better operational agility. Understand how perimeter-based defenses have evolved to become the broken model we use today Explore two
