This volume consists of various studies on the use of methods such as LIDAR (light detection and ranging), archaeological prospection, visibility, mobility and the analysis of the spatial distribution of archaeological objects, applied in various contexts.

This volume presents epigraphic research using digital and computational tools, comparing the outcomes of both well-established and newer projects to consider the most innovative investigative trends. Papers consider open-access databases, SIM Photogrammetry and Digital Image Modelling applied to textual restoration, Linked Open Data, and more.

Like previous series entries, this volume covers rock art research and management all over the world over a 5-year period, in this case 2015-19. Contributions once again show the wide variety of approaches that have been taken in different parts of the world and reflect the expansion and diversification of perspectives and research questions.

Esta obra ofrece una visión real y actualizada del trabajo de los arqueólogos. Una visión que va más allá de los aspectos puramente técnicos, describiendo el pasado que producen los profesionales de la arqueología a partir de los restos materiales. Para ello, Alfredo González Ruibal y Xurxo Ayán Vila no se ciñen solo a los procesos de recogida y análisis de datos, sino que también exploran los principales temas de estudio de la disciplina, tanto los más recientes (movilidad, conflicto) como los clásicos (actividades de producción y mantenimiento, mundo funerario). No es que a los autores no les interesen las técnicas arqueométricas (de hecho están muy presentes a lo largo de la obra) sino que, al contrario que en otros libros introductorios, no será la arqueometría la que gule el discurso, sino, sobre todo, los temas de investigación. Se ha hecho un esfuerzo para que la teoría, recogida al principio del libro, sea perfectamente accesible tanto para los estudiosos de la materia como para el gran público. Por otro lado, pretenden dejar claro el que la Arqueología es una ciencia eminentemente pública y no se entiende hoy en día sin esta dimensión, ya sea por sus implicaciones políticas (Arqueología de los derechos humanos, Arqueologías indígenas), ya sea por los debates éticos en los que se ve involucrada o por su vinculación al patrimonio. Por lo que el apartado dedicado a la relación entre arqueología y sociedad es extenso y exhaustivo. El libro se divide en cuatro grandes partes que abordan cuestiones de tipo teórico (parte I); técnicas de recuperación de datos, documentación y datación (parte II); temas de investigación (parte III); y aspectos sociales de la arqueología (parte IV). Cada uno de los capítulos en los que se dividen estas cuatro partes van profusamente ilustrados con todo tipo de fotografías, grabados, croquis, cuadros... para facilitar la mejor comprensión de lo que los autores nos narran en este manual imprescindible.

Los Sistemas de Información Geográfica (SIG) y las tecnologías espaciales están jugando un papel clave en la interpretación arqueológica. En este sentido, esta investigación explora el uso de SIG en torno al estudio de la configuración de paisaje de la tradición Teuchitlán, una de las sociedades complejas más tempranas en el Occidente de México (400 a.C-450 d.C), su ritmo social a escala regional permitió la proliferación de asentamientos con elementos distintivos como el estilo arquitectónico caracterizado por estructuras circulares, la explotación de yacimientos de obsidiana y la utilización de paisajes agrícolas del Valle de Tequila. En este contexto se han seleccionado una serie de análisis espaciales usados en los SIG, con el propósito de entender la complejidad social de esta tradición, basándose en tres aspectos de aproximación: las formas del espacio, la deconstrucción del espacio y el sentido del espacio. Cada aspecto forma parte sustancial de una interpretación integral de la tradición Teuchitlán y cuestiona las hipótesis existentes sobre patrones de organización social, política y económica, proponiendo un análisis de arqueología espacial y de paisaje bajo la lupa de los SIG. Finalmente esta investigación explica con la ayuda de los SIG, cómo el paisaje arqueológico de la tradición Teuchitlán estaba dividido en pequeñas unidades sociopolíticas interconectadas en una configuración flexible y fluida, que compartirían cotidianamente elementos culturales.

Geographical Information Systems has moved from the domain of the computer specialist into the wider archaeological community, providing it with an exciting new research method. This clearly written but rigorous book provides a comprehensive guide to that use. Topics covered include: the theoretical context and the basics of GIS; data acquisition including database design; interpolation of elevation models; exploratory data analysis including spatial queries; statistical spatial analysis; map algebra; spatial operations including the calculation of slope and aspect, filtering and erosion modeling; methods for analysing regions; visibility analysis; network analysis including hydrological modeling; the production of high quality output for paper and electronic publication; and the use and production of metadata. Offering an extensive range of archaeological examples, it is an invaluable source of practical information for all archaeologists, whether engaged in cultural resource management or academic research. This is essential reading for both the novice and the advanced user.

This heavily-illustrated book covers recent developments in archaeometry and offers a multidisciplinary approach to reconstructing complex cultural histories. It also presents a detailed history of human development in South America's Nasca region.
