Architecture of First Societies: A Global Perspective ...

" This book is the most comprehensively global and critically sensitive synthesis of what we now know of the material and socio-cultural evolution of the so-called First Societies. Written by a distinguished architectural historian and theorist, this truly remarkable and indispensable study shows how the material culture of our forebears, from building to clothing, food, ritual and dance, was inextricably bound up with the mode of survival obtained in a particular place and time...It is a study that will surely become required reading for every student of material culture. " —Kenneth Frampton Starting with the dawn of human society, through early civilizations, to the pre-Columbian American tribes, Architecture of First Societies: A Global Perspective traces the different cultural formations that developed in various places throughout the world to form the built environment. Looking through the lens of both time and geography, the history of early architecture is brought to life with full-color photographs, maps, and drawings. Drawing on the latest research in archaeological and anthropological knowledge, this landmark book also looks at how indigenous societies build today in order to help inform the past.

ARCHITECTURE OF FIRST SOCIETIES THIS LANDMARK STUDY TRACES THE BEGINNINGS OF ARCHITECTURE BY LOOKING AT THE LATEST ARCHAEOLOGICAL AND ANTHROPOLOGICAL RESEARCH From the dawn of human society, through early civilizations, to pre-Columbian American societies, Architecture of First Societies traces the different cultural formations that developed in various places throughout the world to form the built environment. It is the first book to explore the beginnings of architecture from a global perspective. Viewing ancient cultures through a lens of both time and geography, this history of early architecture brings its subjects to life with full-color photographs, maps, and drawings. The author cites the latest discoveries and analyses in archaeology and anthropology and discovers links to the past by examining how indigenous societies build today. " Encounters with Modernity " sections examine some of the political issues that village life and its architectural traditions face in the modern world. This fascinating and engaging tour of our architectural past: Fills a gap in architectural education concerning early mankind, the emergence of First Society people, and the rise of early agricultural societies Presents the story of early architecture, written by the coauthor of the acclaimed A Global History of Architecture Uses the most current research to develop a global picture of human interaction and migration Features color and black-and-white photos and drawings that show site conditions as well as huts, houses, and other buildings under construction in cultures that still exist today Highlights global relationships with color maps Analyzes topics ranging in scale from landscape and culture to building techniques Helps us come to terms with our own modern approaches to historical conditions and anthropological pasts Architecture of First Societies is ideal reading for anyone who seeks a deeper understanding of the strong relationships between geography, ecology, culture, and architecture.

" This book is the most comprehensively global and critically sensitive synthesis of what we now know of the material and socio-cultural evolution of the so-called First Societies. Written by a distinguished architectural historian and theorist, this truly remarkable and indispensable study shows how the material culture of our forebears, from building to clothing, food, ritual and dance, was inextricably bound up with the mode of survival obtained in a particular place and time...It is a study that will surely become required reading for every student of material culture. Looking through the lens of both time and geography, the history of early architecture is brought to life with full-color photographs, maps, and drawings. Drawing on the latest research in archaeological and anthropological knowledge, this landmark book also looks at how indigenous societies build today in order to help inform the past.

Bestselling author Alain de Botton considers how our private homes and public edifices influence how we feel, and how we could build dwellings in which we would stand a better chance of happiness. In this witty, erudite look at how we shape, and are shaped by, our surroundings, Alain de Botton applies Stendhal ' s motto that " Beauty is the promise of happiness " to the spaces we inhabit daily. Why should we pay attention to what architecture has to say to us? de Botton asks provocatively. With his trademark lucidity and humour, de Botton traces how human needs and desires have been served by styles of architecture, from stately Classical to minimalist Modern, arguing that the stylistic choices of a society can represent both its cherished ideals and the qualities it desperately lacks. On an individual level, de Botton has deep sympathy for our need to see our selves reflected in our surroundings; he demonstrates with great wisdom how buildings — just like friends — can serve as guardians of our identity. Worrying about the shape of our sofa or the colour of our walls might seem self-indulgent, but de Botton considers the hopes and fears we have for our homes at a new level of depth and insight. When shopping for furniture or remodelling the kitchen, we don ' t just consider functionality but also the major questions of aesthetics and the philosophy of art: What is beauty? Can beautiful surroundings make us good? Can beauty bring happiness? The buildings we find beautiful, de Botton concludes, are those that represent our ideas of a meaningful life. The Architecture of Happiness marks a return to what Alain does best — taking on a subject whose allure is at once tantalizing and a little forbidding and offering to readers a completely beguiling and original exploration of the subject. As he did with Proust, philosophy, and travel, now he does with architecture.

An look at the situation in contemporary Iran, while it comes to terms with the challenges of the new. Features a collection of essays on the subject, illustrated throughout with photographs of contemporary architecture and images of restored monuments and projects.

Market societies have created more wealth, and more opportunities for more people, than any other system of social organization in history. Yet we still have a rudimentary understanding of how markets themselves are social constructions that require extensive institutional support. This groundbreaking work seeks to fill this gap, to make sense of modern capitalism by developing a sociological theory of market institutions. Addressing the unruly dynamism that capitalism brings with it, leading sociologist Neil Fligstein argues that the basic drift of any one market and its actors, even allowing for competition, is toward stabilization. The Architecture of Markets represents a major and timely step beyond recent, largely empirical studies that oppose the neoclassical model of perfect competition but provide sparse theory toward a coherent economic sociology. Fligstein offers this theory. With it he interprets not just globalization and the information economy, but developments more specific to American capitalism in the past two decades—among them, the 1980s merger movement. He makes new inroads into the "theory of fields," which links the formation of markets and firms to the problems of stability. His political-cultural approach explains why governments remain crucial to markets and why so many national variations of capitalism endure. States help make stable markets possible by, for example, establishing the rule of law and adjudicating the class struggle. State-building and market-building go hand in hand. Fligstein shows that market actors depend mightily upon governments and the members of society for the social conditions that produce wealth. He demonstrates that systems favoring more social justice and redistribution can yield stable markets and economic growth as readily as less egalitarian systems. This book will surely join the classics on capitalism. Economists, sociologists, policymakers, and all those interested in what makes markets function as they do will read it for many years to come.

Situated on idyllic Taylors Island, off the coast of Maryland's Chesapeake Bay, Loblolly House inaugurates a new, more efficient way of building. Through the use of state-of-the-art building information modeling, the architects were able to streamline the design-build process. This is a manual for the componentized prefab.

A groundbreaking history of architecture told through the relationship between buildings and energy The story of architecture is the story of humanity. The buildings we live in, from the humblest pre-historic huts to today's skyscrapers, reveal our priorities and ambitions, our family structures and power structures. And to an extent never explored until now, architecture has been shaped in every era by our access to energy, from fire to farming to fossil fuels. In this ground-breaking history of world architecture, Barnabas Calder takes us on a dazzling tour of some of the most astonishing buildings of the past fifteen thousand years, from Uruk, via Ancient Rome and Victorian Liverpool, to China's booming megacities. He reveals how every building - from the Parthenon to the Great Mosque of Damascus to a typical Georgian house - was influenced by the energy available to its architects, and why this matters. Today architecture consumes so much energy that 40% of the world's greenhouse gas emissions comes from the construction and running of buildings. If we are to avoid catastrophic climate change then now, more than ever, we need beautiful but also intelligent architecture, and to retrofit - not demolish - the buildings we already have.

Presents the recipients of the 1998 Aga Khan Award for Architecture.

This book discusses architectural excellence in Islamic societies drawing on textual and visual materials, from the Aga Khan Documentation Center at MIT, developed over more than three decades. At the core of the discussion are the efforts, processes, and outcomes of the Aga Khan Award for Architecture (AKAA). The AKAA recognises excellence in architectural and urban interventions within cities and settlements in the Islamic world which are continuously challenged by dramatic changes in economies, societies, political systems, decision-making, and environmental requirements. Architectural Excellence in Islamic Societies responds to the recurring question about the need for architectural awards, arguing that they are critical to validating the achievements of professional architects while making their contributions more widely acknowledged by the public. Through analysis and critique of over sixty awarded and shortlisted projects from over thirty-five countries, this book provides an expansive look at the history of the AKAA through a series of narratives on the enduring values of architecture, architectural and urban conservation, built environment sustainability, and architectural pluralism and multiple modernities. Architectural Excellence in Islamic Societies will appeal to professionals and academics, researchers, and upper-level students in architectural history and theory and built environment related fields.
