LEARN PYTHON IN
THE FASTEST AND
EASIEST WAY

Learn Python in a weekend offers you a learning method that will allow you to learn Python in a short period of time, specifically in a weekend! Our experience has demonstrated us that

Where To Download

The best way to learn is to do it while having fun and with a methodology that will teach you progressively all the concepts you need to know. In the first part of the book you will find an explanation of the programming language along with an introduction to the programming environment. In the

Where To Download

second part of the book you will find a total of 100 exercises of progressive difficulty in which, in addition to guiding you step by step, we explain all the theoretical concepts of programming that you need to know to be able to carry them out. The book contains downloadable material!

in Arabic-speaking countries. Pulled from a wide variety of sources that have been edited and simplified for learning purposes, these stories are presented in parallel Arabic and English, facilitating language learning in the classroom and via self-study. Each story is followed by a series of questions in Arabic and

such, it assumes you
have no knowledge
whatsoever about
programming. The
main goal of this book is
to teach fundamental
programming principles
using C, one of the most
widely used
programming languages
in the world today. We

discuss only those features and statements in C that are necessary to achieve our goal.

Once you learn the principles well, they can be applied to any language. If you are worried that you are not good at high-school mathematics, don't be. It is a myth that you must be good at mathematics to learn

programming. C is considered a 'modern' language even though its roots date back to the 1970s. Originally, C was designed for writing 'systems' programs—things like operating systems, editors, compilers, assemblers and input/output utility programs. But, today, C

is used for writing all kinds of applications programs as well—word processing programs, spreadsheet programs, database management programs, accounting programs, games, robots, embedded systems/electronics (i.e., Arduino), educational software—the list is endless. Note:
