The chapters go beyond the basics that characterize much of the literature on dance/movement therapy, and each of the topics covered offers a theoretical perspective followed by case studies that emphasize the techniques used in the varied settings. Several different theoretical points of view are presented in the chapters, illuminating the different paths through which dance can be approached in therapy.

Written by a physicist with professional dance training, *Physics and the Art of Dance* explains how dancers can achieve better, safer performances through an understanding of physics in motion. Using simple, non-technical terms, Kenneth Laws combines his knowledge of both physics and dance to describe how the laws of gravity, momentum, and energy affect dancing bodies. The book explores the natural laws that govern the subtleties of balance, the techniques of leaps and pirouettes, and the impressive lifts and turns executed by ballet partners. Finally, Laws offers insight into two current discussions in the dance world--the effect of body size on ballet technique, and the relationship between science and the art of dance. Beautiful, original stop-action photographs by Martha Swope, along with clear diagrams, illustrate the concepts described in the text. Plus, an intriguing "puzzler" at the beginning of each chapter provides an engaging entrée into the topics presented. For those who want a more advanced understanding of the physics, extensive appendices are provided. This new book combines the best features of Laws's widely acclaimed *The Physics of Dance* and *Physics, Dance, and the Pas de Deux* by Laws and Cynthia Harvey. Its expert application of the basic principles of physics to the art of dance will be an invaluable resource for dancers and dance instructors and will open a new level of appreciation for lovers of the form. It will also appeal to physicists who seek to include the arts in their scientific pursuits.

Moving Sites explores site-specific dance practice through a combination of analytical essays and practitioner accounts of their working processes. In offering this joint effort of theory and practice, it aims to provide dance academics, students and practitioners with a series of discussions that shed light both on approaches to making this type of dance practice, and evaluating and reflecting on it. The edited volume combines critical thinking from a range of perspectives including commentary and observation from the fields of dance studies, human geography and spatial theory in order to present interdisciplinary discourse and a range of critical and practice-led lenses through which this type of work can be considered and explored. In so doing, this book addresses the following questions: · How do choreographers make site-specific dance performance? · What occurs when a moving body engages with site, place and environment? · How might we interpret, analyse and evaluate this type of dance practice through a range of theoretical lenses? · How can this type of practice inform wider discussions of embodiment, site, space, place and environment? This innovative and exciting book seeks to move beyond description and discussion of site-specific dance as a spectacle or novelty and considers site-dance as a valid and vital form of contemporary dance practice that explores, reflects, disrupts, contests and develops understandings and practices of inhabiting and engaging with a range of sites and environments. Dr Victoria Hunter is Senior Lecturer in Dance at the University of Chichester.

From a gentle mountain pond to a raging waterfall or from a silent ocean mist to a sparkling rainbow, dramatic text and paintings give water voice and substance in this tribute to water in all its glorious forms. Inspiring and informative, *Water Dance* is a poetic introduction to one of nature's most basic elements. Scientific facts about water and its role in our lives are included. "Thirteen lushly romantic oil paintings, accompanied by spare, poetic text, offer viewers a sensuous introduction to the water cycle."--The Bulletin

Life as Art synthesizes a number of aesthetic theories in philosophy after 1850 and shows the ways in which they contribute to a unified field of analysis and potential implementation. The book is framed both as a secondary text, analyzing 19th and 20th Century aesthetics, and a primary argument for the viability of life as art as a unified philosophical position.
