announcements that are published for general public information. It is published every week, usually on Friday, with occasional releases of special or supplementary editions within the week.

In the last few years, logistics has become a strategic factor for development and competition. In fact, research and development activities have traditionally faced the management of supply chain and international transport focusing on two main aspects: speed and efficiency. However, several vulnerabilities have recently been highlighted under a safety and security viewpoint. The weakness of the logistic chains has become more evident with the beginning of the new millennium. Terrorist attacks, such as the 11th of September 2001 in the USA, have caused the introduction of new rules and procedures, which affect the overall logistics showing the vulnerability of the global economy. So, nowadays, it would appear anachronistic to carry out an exhaustive research activity on the supply chain with no relation to the various typologies of risk, which may affect it. This book aims to effectively represent the current status of research on dangerous goods transport.

Combining materials from Mercedes-Benz 's official archives with information collected from professionals involved with the marque, this book provides a unique, never before seen, perspective on how the brand developed its products to provide transportation solutions across some of the most diverse operating conditions in the world. With rare and previously unpublished photos of working trucks in action, this comprehensive book also features historical information, explanations of model codes, descriptions of models and variations from around the world, and shows some of the biggest, ' baddest ' and most unusual Mercedes-Benz trucks from around the globe.

The Kenya Gazette is an official publication of the government of the Republic of Kenya. It contains notices of new legislation, notices required to be published by law or policy as well as other announcements that are published for general public information. It is published every week, usually on Friday, with occasional releases of special or supplementary editions within the week.

"...a must-read text that provides a historical lens to see how ubicomp has matured into a multidisciplinary endeavor. It will be an essential reference to researchers and those who want to learn more about this evolving field." -From the Foreword, Professor Gregory D. Abowd, Georgia Institute of Technology First introduced two decades ago, the term ubiquitous computing is now part of the common vernacular. Ubicomp, as it is commonly called, has grown not just quickly but broadly so as to encompass a wealth of concepts and technology that serves any number of purposes across all of human endeavor. While such growth is positive, the newest generation of ubicomp practitioners and researchers, isolated to specific tasks, are in danger of losing their sense of history and the broader perspective that has been so essential to the field 's creativity and brilliance. Under the guidance of John Krumm, an original ubicomp pioneer, Ubiquitous Computing Fundamentals brings together eleven ubiquitous computing trailblazers who each report on his or her area of expertise. Starting with a historical introduction, the book moves on to summarize a number of self-contained topics. Taking a decidedly human perspective, the book includes discussion on how to observe people in their natural environments and evaluate the critical points where ubiquitous computing technologies can improve their lives. Among a range of topics this book examines: How to build an infrastructure that supports ubiquitous computing applications Privacy protection in systems that connect personal devices and personal information Moving from the graphical to the ubiquitous computing user interface Techniques that are revolutionizing the way we determine a person 's location and understand other sensor measurements While we needn 't become expert in every sub-discipline of ubicomp, it is necessary that we appreciate all the perspectives that make up the field and understand how our work can influence and be influenced by those perspectives. This is important, if we are to encourage future generations to be as successfully innovative as the field 's originators.

The fast progress in computer networks and their wide availability complemented with on one hand the "explosion" of the mobile computing and on the other hand the trends in the direction of ubiquitous computing, act as powerful enablers for new forms of highly dynamic collaborative organizations and emergence of new business practices. The first efforts in virtual enterprises (VE) were strongly constrained by the need to design and develop horizontal infrastructures aimed at supporting the basic collaboration needs of consortia of enterprises. Even pilot projects that were focused on specific business domains were forced to first develop some basic infrastructures before being able to develop their specific business models. Nowadays, although there is still a need to consolidate and standardize the horizontal infrastructures, the focus is more and more directed to the development of new vertical business models and the corresponding support tools. At the same time, in the earlier R&D projects, the attention was almost exclusively devoted to the operation phase of the VE life cycle, while now there are more activities addressing the creation phase, developing mechanisms to support the rapid formation of new virtual organizations for new business opportunities. In order to complete the life cycle, there is a need to also invest on support for VE dissolution.

In November 1991 the American flag was lowered for the last time at Clark Air Base in the Philippines. This act brought to an end American military presence in the Philippines that extended back over 90 years. It also represented the final act in a drama that began with the initial rumblings in April of that year of the Mount Pinatubo volcano, located about 9 miles to the east of Clark. The following pages tell the remarkable story of the men and women of the Clark community and their ordeal in planning for and carrying out their evacuation from Clark in the face of impending volcanic activity. It documents the actions of those who remained on the base during a series of eruptions, and the packing out of the base during subsequent months. This is the story of the "Ash Warriors," those Air Force men and women who carried out their mission in the face of an incredible series of natural disasters, including volcanic eruption, flood, typhoons, and earthquakes, all of which plagued Clark and the surrounding areas during June and July 1991. The author of "The Ash Warriors" knew the situation first hand. Colonel Dick Anderegg was the vice commander of the 3rd Tactical Fighter Wing when the volcano erupted, and he was at Clark throughout the evacuation and standing down of the base. He brought his own personal experience to bear in writing this story. He also conducted extensive research in the archives of the Pacific Air Forces and Thirteenth Air Force, utilized scores of interviews of those who witnessed and participated in the events, and visited Clark in 1998 to see in person how the installation had changed in the 8 years since the Americans left. This story is one of courage, resourcefulness, and dedication to duty on the part of Air Force men and women called upon to respond to one of the great natural disasters of the 20th Century. As the following pages reveal, the Ash Warriors were up to the challenge in every respect.
