"Coursebook on law and neuroscience, including the bearing of neuroscience on criminal law, criminal procedure, and evidence"--

What are people who read opinion-page articles looking for? How can you reach people who read general-interest magazines? Hint: It's not the same as your colleagues or science journals. This compact book offers the reasons and information that can help scientific writers adopt new habits to be successful and happy writing for a non-science audience. Go ahead and write journal-style for science journals and colleagues, says longtime science editor Jane Nevins, but you'll need to try different styles to reach a different audience. The book is divided into three parts: The Meet-up, Simple Fixes, and Science and Style. In The Meet-up, Nevins describes the different venues for lay writing, from opinion pages to popular magazines, and what readers of each expect and respond to best. In Simple Fixes, she shows how jargon, "cross-over words," and hackneyed expressions can be remedied, clearing away confusion for your readers. In Science and Style, she discusses what to put first, how to quote and paraphrase in lay copy, and what to leave out. Throughout You've Got Some Explaining to Do, Nevins gives concrete, specific examples tied to neuroscience. The author, who served as the first editor in chief of the Dana Press, brings more than 20 years of experience in translating neuroscience to lay readers. "No one is better at helping one learn to write for the non-professional public, as I can personally testify, than Jane Nevins."-Nobel laureate Eric R. Kandel, M.D., Director, Kavli Institute for Brain Science, Columbia University College of Physicians and Scientists.

Brain Facts is a primer on the brain and nervous system, published by the Society for Neuroscience. Brain Facts is a valuable resource for educators, students, and anyone interesting in learning about neuroscience. Download an audio recording of Brain Facts today, available on BrainFacts.org and through iTunes U. The brain is the most complex biological structure in the known universe. It is a topic rich with exciting new discoveries, continuing profound unknowns, and critical implications for individuals, families, and societies. Learn more about the brain and nervous system through articles, images, videos, and more on BrainFacts.org, a public information initiative of The Kavli Foundation, the Gatsby Charitable Foundation, and the Society for Neuroscience.

Promotes a model of critique for teachers, scholars, and policy makers to challenge established educational practice in a global context. The Wiley International Handbook of Educational Foundations features international scholars uniquely qualified to examine issues specific to their regions of the world. The Handbook provides readers with an alternative to the traditional texts in the foundations of education by taking aim at the status quo, and by offering frameworks from which teachers and scholars of education can critically evaluate schools and schooling. Throughout, the essays are grounded in a broad historical context and the authors use an international lens to examine current controversies in order to provoke the kinds of discussion crucial for developing a critical stance. The Handbook is presented in six parts, each beginning with an Introduction to the subject. The sections featured are: Part I. Challenging Foundational Histories and Narratives of Achievement; Part II. Challenging Notions of Normalcy and Dominion; Part III. Challenging the Profession; Part IV. Challenging the Curriculum; Part V. Challenging the Idea of Schooling; and Part VI. Challenging Injustice, Inequity, and Enmity. The Wiley International Handbook of Educational Foundations offers unique insight into subjects such as: Educational reform in India, Pakistan, and China The global implications of equity-driven education Teacher education and inclusionary practices The Global Educational Reform Movement (G.E.R.M.) Education and the arts Maria Montessori and Loris Malaguzzi Legal education in authoritarian Syria The Wiley International Handbook of Educational Foundations is an important book for current and aspiring educators, scholars, and policy makers.

The fourth edition of the work that defines the field of cognitive neuroscience, offering completely new material.

Scientism: The New Orthodoxy is a comprehensive philosophical overview of the question of scientism, discussing the role and place of science in the humanities, religion, and the social sciences. Clarifying and defining the key terms in play in discussions of scientism, this collection identifies the dimensions that differentiate science from scientism. Leading scholars appraise the means available to science, covering the impact of the neurosciences and the new challenges it presents for the law and the self. Illustrating the effect of scientism on the social sciences, and the humanities, Scientism: the New Orthodoxy addresses what science is and what it is not. This provocative collection is an important contribution to the social sciences and the humanities in the 21st century. Contributors include: Peter Hacker, Bastiaan van Fraassen, Daniel N. Robinson, Kenneth Schaffner, Roger Scruton, James K.A. Smith, Richard Swinburne, Lawrence Principe and Richard N. Williams.

Reviews Treasury Dept regulation of tax-exempt foundations. Focuses on investigation of the Americans Building Constitutionally foundation's promotion of small foundations as tax shelters and legality of its tax practices. Exhibits relating to the investigation begin on p. 283. Appendix, Vol. II. Contains IRS lists of names and addresses of approximately 30,000 tax-exempt foundations.
