Pelicans are large water birds with distinctive pouches under their bills. Like other birds in the order Pelecaniformes, they have four webbed toes. Great white pelican, *Pelecanus onocrotalus*; Australian pelican, *Pelecanus conspicillatus*; Pink-backed pelican, *Pelecanus rufescens*; Spot-billed pelican, *Pelecanus philippensis*

List of birds of Asia - Wikipedia

The top list on this page is the frequency of birds throughout the year. Many birds are migratory or otherwise vary in abundance between seasons. So the next two lists are the common birds ranked in winter and then in summer. The most common backyard birds in New York in winter (December to February) are these: 1. Black-capped Chickadee (42% ...

Common backyard birds of New York (lists, photos, ID ...

Baird's Sandpiper: This medium-sized bird has scaled gray-brown upperparts, white underparts and a dark-spotted gray-brown breast. The crown, face and neck are buff with fine brown streaks. It has a white rump with a dark central stripe and black legs and feet. Feeds on insects and spiders.

Category talk:Important Bird Areas of Central Asia - Wikipedia

Central Park is one of the world's best birdwatching sites based on its geographic location. In the book *Birding Basics*, renowned author and artist David Sibley says, "Migrating birds that find themselves anywhere in the vicinity of Manhattan, gravitate toward Central Park, the

largest patch of natural habitat in the area".

Birds of Central Asia is the first field guide to include the former Soviet republics of Kazakhstan, Kirghizstan, Turkmenistan, Uzbekistan and Tajikistan, along with neighbouring Afghanistan. This vast area includes a diverse variety of habitats, and the avifauna is similarly broad, from sandgrouse, ground jays and larks on the vast steppe and semi-desert to a broad range of raptors, and from woodland species such as warblers and nuthatches to a suite of montane species, such as snowcocks, accentors and snowfinches. This book includes 141 high-quality plates covering every species (and all distinctive races) that occur in the region, along with concise text focusing on identification and accurate colour maps. Important introductory sections introduce the land and its birds. Birds of Central Asia is a must-read for any birder or traveller visting this remote region.

The demise of the Silk Roads and the end of expansionist policies, together with the rapid increase in maritime trade, brought to an end the vital economic and cultural interchange that had characterized the years preceding the death of the Ming-dynasty Yongle emperor in 1424. Overland, intrepid merchants no longer transported silks throughout Eurasia and weavers no longer traveled to distant lands. But the products that survive from that wondrous time attest to a glorious era - when silk was resplendent as gold.

The Poyser avifaunas Birds in Scotland, Birds in Ireland and Birds in Wales are all now regarded as classic works. The series is now completed with Birds in England, an avifauna for England's diverse birdlife, past and present. England marks the northwestern limit for many Palearctic breeding birds, and is close to the southwestern limit for several others - in particular, several seabird species whose English colonies are of international significance. It is the first point of arrival for new colonists from the south - Little Egret and Yellow-legged Gull are two recent arrivals - and it is also of international importance for wintering and passage populations of various species which breed in the far north of the Palearctic. A diverse and fascinating avifauna is augmented by visits from an impressive range of rarities from as far afield as Siberia and Canada - Nearctic vagrants in particular are well-represented on the English list. This important new avifauna looks in detail at England and its birds, analysing present and historical data to present a complete picture of the status, range and abundance of every bird on the English list.

This volume, which accompanies a major exhibition at The Metropolitan Museum of Art, New York, explores the artistic achievements of the era of the first cities in both the Mesopotamian heartland and across the expanse of western Asia.

A new, improved and thoroughly updated edition of the bestselling photographic guide--the only one to cover every bird, in every plumage, ever recorded in Britain and Ireland A

bestselling guide since it was first published, Britain's Birds has quickly established itself as the go-to photographic identification guide to the birds of Great Britain and Ireland--the most comprehensive, up-to-date, practical and user-friendly book of its kind. Acclaimed by birdwatchers of all kinds, from the beginner to the most experienced, the guide has now been thoroughly revised and updated to make it even better than before. Combining the finest of identification guide content and presentation, this eagerly awaited second edition preserves the best of the first edition while covering twelve newly recorded species and offering a host of improvements that make identification easier. Provides comprehensive coverage of all the birds ever recorded in Britain and Ireland Describes and illustrates all plumages likely to be encountered Features more than 3,200 stunning photographs carefully selected to show the birds as you really see them Outlines simple steps to help you identify any bird you see Presents simple and accurate comparisons of similar and difficult species New features include: Coverage of 12 new species recorded since the first edition plus revisions to reflect the latest taxonomy Coverage of all subspecies Improved identification aids, including more than 400 new photos, enhanced photo annotations and many redesigned plates Fully revised species accounts, including the latest information on identification features, status, numbers, geographical range and date ranges for all plumages that may be seen during only part of the year
