Get hands-on experience implementing 26 of the most common design patterns using Java and Eclipse. In addition to Gang of Four (GoF) design patterns, you will also learn about alternative design patterns, and understand the criticisms of design patterns with an overview of anti-patterns. For each pattern you will see at least one real-world scenario, a computer-world example, and a complete implementation including output. This book has three parts. The first part covers 23 Gang of Four (GoF) design patterns. The second part includes three alternative design patterns. The third part presents criticisms of design patterns with an overview of anti-patterns. You will work through easy-to-follow examples to understand the concepts in depth and you will have a collection of programs to port over to your own projects. A Q&A session is included in each chapter and covers the pros and cons of each pattern. The last chapter presents FAQs about the design patterns. The step-by-step approach of the book helps you apply your skills to learn other patterns on your own, and to be familiar with the latest version of Java and Eclipse. Programming in the Large with Design Patterns is a terrific resource for learning about design patterns. It starts with a general introduction to all types of programming patterns and goes on to describe 10 of the most popular design patterns in detail: Singleton, Iterator, Adapter, Decorator, State, Strategy, Factory Method, Observer, Facade and Template Method. Each pattern is introduced with a non-technical example or story that illustrates the pattern concept. The details are described with Java code examples and UML diagrams. Each pattern description also includes a discussion section that offers more in-depth information for the curious. For example, the discussion section for Singleton explains why introducing a singleton is only marginally better than using a global variable. Instructor resources, including PowerPoint presentation slides and review questions with answers, are available at the companion website <http://programminglarge.com/>.
