The mountain chain known as the Blue Ridge traces a 550-mile arc through Pennsylvania, Virginia, North Carolina, Tennessee, South Carolina, and Georgia. Along the way, it encompasses Shenandoah National Park, Great Smoky Mountains National Park, the Blue Ridge Parkway, seven national forests, numerous federal wilderness areas and state parks, and parts of the Appalachian Trail. It is the largest concentration of public lands east of the Mississippi and home to an astonishing diversity of plant and animal life. But as the most extensive natural area in the increasingly populous Southeast, the Blue Ridge ecosystem faces unique challenges in the next decades. Drawing on scientific research in a variety of disciplines, journalist Steve Nash provides a clear and evenhanded introduction to some of the most hotly disputed environmental issues facing the Blue Ridge, including the invasion of exotic plants and insects, the explosive growth of suburban-style communities in natural areas, worsening air and water pollution, and the erratic management of national forests. Informative and highly readable, Blue Ridge 2020 takes a hard look at what is at risk in these mountains and what we—as the “owners” of the public lands—must do if we intend to preserve their future.

The Centers for Disease Control and Prevention (CDC) established the Vessel Sanitation Program (VSP) in the 1970s as a cooperative activity with the cruise ship industry. The program assists the cruise ship industry in fulfilling its responsibility for developing and implementing comprehensive sanitation programs to minimize the risk for acute gastroenteritis. Every vessel that has a foreign itinerary and carries 13 or more passengers is subject to twice-yearly inspections and, when necessary, re-inspection.
