The time for new approaches to White ’ s work is overdue. Central to the present study are Edward Said ’ s ideas about the role of the intellectual (and the writer) – of speaking “ truth to power, ” and also the importance of tracing the “ affiliations ” of a text and its embeddedness in the world. This approach is not incompatible with Jung ’ s theory of the “ great ” artist and his capacity to answer the deep-seated psychic needs of his people. White ’ s work has contributed in many different ways to the writing of the nation. The spiritual needs of a young nation such as Australia must also comprehend its continual urge towards self-definition. Explored here is one important aspect of that challenge: white Australia ’ s dealings with the indigenous people of the land, tracing the significance of the Aboriginal presence in three texts selected from the oeuvre of Patrick White: Voss (1957), Riders in the Chariot (1961), and A Fringe of Leaves (1976). Each of these texts interrogates European culture ’ s denigration of the non-European Other as embedded in the discourse of orientalism. One central merit of White ’ s commanding perspective is the constant close attention he pays to European hubris and to the paramount autonomy of indigenous culture. There is evidence even of a project which can be articulated as a search for the possibility of white indigeneity, the potential for the white settler ’ s belonging within the land as does the indigene.

Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles evaluates various technologies and methods that could improve the fuel economy of medium- and heavy-duty vehicles, such as tractor-trailers, transit buses, and work trucks. The book also recommends approaches that federal agencies could use to regulate these vehicles' fuel consumption. Currently there are no fuel consumption standards for such vehicles, which account for about 26 percent of the transportation fuel used in the U.S. The miles-per-gallon measure used to regulate the fuel economy of passenger cars is not appropriate for medium- and heavy-duty vehicles, which are designed above all to carry loads efficiently. Instead, any regulation of medium- and heavy-duty vehicles should use a metric that reflects the efficiency with which a vehicle moves goods or passengers, such as gallons per ton-mile, a unit that reflects the amount of fuel a vehicle would use to carry a ton of goods one mile. This is called load-specific fuel consumption (LSFC). The book estimates the improvements that various technologies could achieve over the next decade in seven vehicle types. For example, using advanced diesel engines in tractor-trailers could lower their fuel consumption by up to 20 percent by 2020, and improved aerodynamics could yield an 11 percent reduction. Hybrid powertrains could lower the fuel consumption of vehicles that stop frequently, such as garbage trucks and transit buses, by as much 35 percent in the same time frame.
