Canada has one of the most unique landscapes in the world. With a population of just 36.4 million people, the density of the population of this vast country is largely due to the high proportion of uninhabitable or inhospitable land mass including vast swathes of tundra, forests and, of course, the Rocky Mountains.

The American population tends to be on the move. The US Census Bureau data show that the average American moves once every seven years; these data further predict that about forty million people move each year (US Census Bureau). Data also indicate Americans will move to a metropolitan area. Urbanization has been a trend since about 1950.

Read Book Chapter 25 British Population Moves To The Cities

This work addresses the central constitutional issues that divided the American colonists from their English legislators: the authority to tax, the authority to legislate, the security of rights, the nature of law, and the foundation of constitutional government in custom and contractarian theory.

This collection of fresh, incisive scholarship, by some of the leading business historians, critically examines the nature of economic recovery in Britain in recent years. Covering the key issues for business history in this period, the book confronts the traditional literature on conclusions of relative decline, and monocausal, simplistic explanations. It provides an impressive range of studies forming a platform for a new debate on the nature of British business in the 20th century. Themes include productivity, management, research and development, marketing, regional clusters and networks, industrial policy, the use of technology, and gender. Sector studies include newer, post-war hopefuls and successes including: * aerospace, * IT, * retail, * banking, * overseas investment, * the creative industries. The book demonstrates that our understanding of the historic strengths and weaknesses of business in Britain, and the shifting balance between sectors of the economy, has until now been poorly understood, and that British business history needs a fundamental reappraisal.

Whilst in certain quarters it may be fashionable to suppose that there is no such thing as society historians, they have had no difficulty in finding their subject. The difficulty, rather, is that an outpouring of research and writing is hard for anyone but the specialist to keep up with the literature or grasp the overall picture. In these three volumes, as is the tradition in Cambridge Histories, a team of specialists has assembled the jigsaw of topical monographic research and presented an interpretation of the development of modern British society since 1750, from three perspectives: those of regional communities, the working and living environment, and social institutions. Each volume is self-contained, and each contribution, thematically defined, contains its own chronology of the period under review. Taken as a whole they offer an authoritative and comprehensive view of the manner and method of the shaping of society in the two centuries of unprecedented demographic and economic change.

This is the only textbook which offers students a complete picture of Britain's population structure using a synthetic approach to discuss a number of topics.

The anthrax incidents following the 9/11 terrorist attacks put the spotlight on the nation's public health agencies, placing it under an unprecedented scrutiny that added new dimensions to the complex issues considered in this report. The Future of the Public's Health in the 21st Century reaffirms the vision of Healthy People 2010, and outlines a systems approach to assuring the nation's health in practice, research, and policy. This approach focuses on joining the unique resources and perspectives of diverse sectors and entities and challenges these groups to work in a concerted, strategic way to promote and protect the public's health. Focusing on diverse partnerships as the framework for public health, the book discusses: The need for a shift from an individual to a population-based approach in practice, research, policy, and community engagement. The status of the governmental public health infrastructure and what needs to be improved, including its interface with the health care delivery system. The roles nongovernment actors, such as academia, business, local communities and the media can play in creating a healthy nation. Providing an accessible analysis, this book will be important to public health policy-makers and practitioners, business and community leaders, health advocates, educators and journalists.

This innovative Handbook offers a deeper understanding of the causes and consequences of demographic change across the lifecourse. Chapters highlight major theoretical and methodological advances and present research that sheds light on family dynamics, health and mobility over the lifecourse, illustrating the implications of lifecourse research for policy and reform.

This electronic version has been made available under a Creative Commons (BY-NC-ND) open access license. This book is available as an open access ebook under a CC-BY-NC-ND licence. *Vaccinating Britain* shows how the British public has played a central role in the development of vaccination policy since the Second World War. It explores the relationship between the public and public health through five key vaccines – diphtheria, smallpox, poliomyelitis, whooping cough and measles-mumps-rubella (MMR). It reveals that while the British public has embraced vaccination as a safe, effective and cost-efficient form of preventative medicine, demand for vaccination and trust in the authorities that provide it has ebbed and flowed according to historical circumstances. It is the first book to offer a long-term perspective on vaccination across different vaccine types. This history provides context for students and researchers interested in present-day controversies surrounding public health immunisation programmes. Historians of the post-war British welfare state will find valuable insight into changing public attitudes towards institutions of government and vice versa.

The Making of the Modern British Home explores the impact of the modern suburban semi-detached house on British family life during the 1920s and 1930s - focusing primarily on working-class households who moved from cramped inner-urban accommodation to new suburban council or owner-occupied housing estates. Migration to suburbia is shown to have initiated a dramatic transformation in lifestyles - from a 'traditional' working-class mode of living, based around long-established tightly-knit urban communities, to a recognisably 'modern' mode, centred around the home, the nuclear family, and building a better future for the next generation. This process had far-reaching impacts on family life, entailing a change in household priorities to meet the higher costs of suburban living, which in turn impacted on many aspects of household behaviour, including family size. This volume also constitutes a general history of the development of both owner-occupied and municipal suburban housing estates in interwar Britain, including the evolution of housing policy; the housing development process; housing and estate design, lay-outs, and architectural features; marketing owner-occupation and consumer durables to a mass market; furnishing the new suburban home; making ends meet; suburban gardens; social filtering and conflict on the new estates; and problems of 'mis-selling' and 'Jerry building'. Peter Scott integrates the social history of the interwar suburbs with their economic, business, marketing, and architectural/planning histories, demonstrating how these elements interacted to produce a new model of working-class lifestyles and 'respectability' which marked a fundamental break with pre-1914 working-class urban communities.

Pamila Gupta takes a unique approach to examining decolonization processes across Lusophone India and Southern Africa, focusing on Goa, Mozambique, Angola and South Africa, weaving together case studies using five interconnected themes. Gupta considers decolonization through the twined lenses of history and ethnography, accessed through written, oral, visual and eyewitness accounts of how people experienced the transfer of state power. She looks at the materiality of decolonization as a movement of peoples across vast oceanic spaces, demonstrating how it was a process of dispossession for both the Portuguese formerly in power and ordinary colonial citizens and subjects. She then discusses the production of race and class anxieties during decolonization, which took on a variety of forms but were often articulated through material objects. The book aims to move beyond linear histories of colonial independence by connecting its various regions using the theme of decolonization, offering a productive and new approach to writing post-national histories and ethnographies. Finally, Gupta demonstrates the value of using different source materials to access narratives of decolonization, analyzing the work of Mozambican photographer Ricardo Rangel, and including lyrical prose and ethnographical observations. *Portuguese Decolonization in the Indian Ocean World* provides a nuanced understanding of Lusophone decolonization, revealing the perspectives of people who experienced it. This book will be highly valuable for historians of the Indian Ocean world and decolonization, but also those interested in ethnography, diaspora studies and material culture.
