A bullet dropped and a bullet fired from a gun will reach the ground at the same time. Plants get the majority of their mass from the air around them, not the soil beneath them. A smartphone is made from more elements than you. Every day, science teachers get the opportunity to blow students' minds with counter-intuitive, crazy ideas like these. But getting students to understand and remember the science that explains these observations is complex. To help, this book explores how to plan and teach science lessons so that students and teachers are thinking about the right things – that is, the scientific ideas themselves. It introduces you to 13 powerful ideas of science that have the ability to transform how young people see themselves and the world around them. Each chapter tells the story of one powerful idea and how to teach it alongside examples and non-examples from biology, chemistry and physics to show what great science teaching might look like and why. Drawing on evidence about how students learn from cognitive science and research from science education, the book takes you on a journey of how to plan and teach science lessons so students acquire scientific ideas in meaningful ways. Emphasising the important relationship between curriculum, pedagogy and the subject itself, this exciting book will help you teach in a way that captivates and motivates students, allowing them to share in the delight and wonder of the explanatory power of science.

BANNED: The Golden Book of Chemistry Experiments was a children's chemistry book written in the 1960s by Robert Brent and illustrated by Harry

Lazarus, showing how to set up your own home laboratory and conduct over 200 experiments. The book is controversial, as many of the experiments contained in the book are now considered too dangerous for the general public. There are apparently only 126 copies of this book in libraries worldwide. Despite this, its known as one of the best DIY chemistry books every published. The book was a source of inspiration to David Hahn, nicknamed "the Radioactive Boy Scout" by the media, who tried to collect a sample of every chemical element and also built a model nuclear reactor (nuclear reactions however are not covered in this book), which led to the involvement of the authorities. On the other hand, it has also been the inspiration for many children who went on to get advanced degrees and productive chemical careers in industry or academia.

Assessment in Science combines professional development and classroom practice in a single volume. The pragmatic nature of the book makes it a valuable resource for administrators and staff developers interested in designing professional development programs, and for science teachers looking for techniques and examples of classroom-based assessments. Unique features of Assessment in Science include: 1) practical strategies and tools for implementing successful professional development programs in science assessment, 2) teacher stories and case studies about classroom-based assessment practice and how these teachers changed their assessment practice, 3) examples of classroom-based assessments and scoring guides, 4) samples of student work with teacher commentary, and 5) examples of how the national reform documents in science education served as tools in professional development programs and in designing classroom-based assessments. Assessment in Science expands the existing literature on science assessment by sharing a model for professional development, and examples of teacher-developed assessments with accompanying student work and teacher commentary. Chapters written by science teachers tell how they assess students and how they have changed their assessment practice, as well as how changing assessment practice has resulted in a change in their science instruction. Assessment in Science is targeted at practising professionals in science education: administrators, staff developers, science teachers, and university science educators. Assessment in Science has applicability to graduate-level courses in science education and in-service courses for science teachers. The teacher chapters are also appropriate for use in undergraduate science methods courses to illustrate classroom-based assessments.
