Diagnostics, or fault finding, is a fundamental part of an automotive technician's work, and as automotive systems become increasingly complex there is a greater need for good diagnostic skills. Advanced Automotive Fault Diagnosis is the only book to treat automotive diagnostics as a science rather than a check-list procedure. Each chapter includes basic principles and examples of a vehicle system followed by the appropriate diagnostic techniques, complete with useful diagrams, flow charts, case studies and self-assessment questions. The book will help new students develop diagnostic skills and help experienced technicians improve even further. This new edition is fully updated to the latest technological developments. Two new chapters have been added – On-board diagnostics and Oscilloscope diagnostics – and the coverage has been matched to the latest curricula of motor vehicle qualifications, including: IMI and C&G Technical Certificates and NVQs; Level 4 diagnostic units; BTEC National and Higher National qualifications from Edexcel; International Motor Vehicle qualifications such as C&G 3905; and ASE certification in the USA.

In color throughout, Illustrated Manual of Injectable Fillers clearly evaluates the uses, limitations, and compositions of the growing variety of available fillers involved in face and body rejuvenation. It includes detailed techniques for the facial analysis and diagnosis of aging conditions. This resource helps you provide your patients with safe, reliable, and aesthetically pleasing results, including preventing and properly treating potential complications of filler usage. Clearly organized by anatomy, the book discusses the specific analysis, diagnosis, and treatment for the upper face, midface, lower face and neck, hands, and the torso (after liposuction). It is an excellent introduction for novices performing volume restoration procedures and an invaluable guide to novel techniques and advanced procedures for experienced physicians.
