For the first time, a single reference identifies medical technology assessment programs. A valuable guide to the field, this directory contains more than 60 profiles of programs that conduct and report on medical technology assessments. Each profile includes a listing of report citations for that program, and all the reports are indexed under major subject headings. Also included is a cross-listing of technology assessment report citations arranged by type of technology headings, brief descriptions of approximately 70 information sources of potential interest to technology assessors, and addresses and descriptions of 70 organizations with memberships, activities, publications, and other functions relevant to the medical technology assessment community.

Presenting a bird's eye view of the important components in biomedical engineering, this book explores how bioengineering has emerged as an important aid to diagnosis, therapy, and rehabilitation. The author discusses the application of electrical, mechanical, chemical, optical and other engineering principles to understand, modify or control biological systems. He covers the design and manufacture of products for monitoring physiological functions, assisting in diagnoses, assessing prognoses, and helping in treatment of patients. It also provides a glimpse of emerging trends in biomedical engineering like telemedicine and the wider use of computers in health care.
