This book explores the new product development process of firms developing frugal innovation for the base-of-the-pyramid (BOP) markets in developing countries. Frugal innovations are products characterised by an affordable price-point, durability, usability and core functionalities that are highly adapted to BOP consumers' needs. Frugal products have the potential to drive the development progress and living standards of low-income consumers. With an innovation framework developed from worldwide frugal case studies, this book provides detailed insights through two in-depth start-up firms in Indonesia that have successfully launched frugal products for the low-income market. These two start-ups have addressed two major development challenges for not just Indonesia, but also the global BOP market – traditional methods of cooking and access to clean drinking water. A detailed roadmap is developed from insights into the processes and management decisions of these two start-ups and combined with previous studies on frugal products. Providing a detailed roadmap across the different phases and stages of the new product development process when developing frugal products, this book will be insightful to not only innovators but also investors and government agencies supporting their activities.

After a brief review of the research background and of the project itself, successive chapters describe the specific practices which teachers found fruitful and the underlying ideas about learning that these developments illustrate. Later chapters discuss the problems that teachers encountered when implementing the new practices in their classroom and give guidance for school management and LEAs about promoting and supporting the changes. --from publisher description

Contemporary science teaching approaches focus on fostering students to construct new scientific knowledge as a process of inquiry rather than having them act as passive learners memorizing stated scientific facts. Although this perspective of teaching science is clearly emphasized in the National Research Council's National Science Education Standards (NRC, 1996), it is however challenging to achieve in the classroom.

Science teaching approaches should enhance students' conceptual understanding of scientific concepts which can be later utilized by students in deeper recognition of real world (Marsak & Janouskova, 2007). This book identifies and describes several different contemporary science teaching approaches and presents recent applications of these approaches in promoting interest among students. It promotes conceptual understanding of science concepts among them as well. This book identifies pertinent issues related to strategies of teaching science and describes best practice The chapters in this book are culmination of years of extensive research and development efforts to understand more about how to teach science by the distinguished scholars and practicing teachers.
