Hermann Günther Graßmann was
one of the most remarkable
personalities in 19th-
century science. A "small-
town genius", he developed a
groundbreaking n-dimensional
algebra of space and
contributed to a revolution
in the understanding of
mathematics. His work
fascinated great
mathematicians such as W. R.
Hamilton, J. W. Gibbs and A.

N. Whitehead. This intellectual biography traces Graßmann's steps towards scientific brilliance by untangling a complicated web of influences: the force of unsolved problems in mathematics, Friedrich Schleiermacher's Dialectic, German Romanticism and life in 19th-century Prussia. The book also introduces the reader to the details of Graßmann's mathematical work without neglecting his achievements in Sanskrit philology and physics. And, for the first time, it makes many original sources accessible to the English-language reader.
