Every year, the U.S. Army must select from an applicant pool in the hundreds of thousands to meet annual enlistment targets, currently numbering in the tens of thousands of new soldiers. A critical component of the selection process for enlisted service members is the formal assessments administered to applicants to determine their performance potential. Attrition for the U.S. military is hugely expensive. Every recruit that does not make it through basic training or beyond a first enlistment costs hundreds of thousands of dollars. Academic and other professional settings suffer similar losses when the wrong individuals are accepted into the wrong schools and programs or jobs and companies. Picking the right people from the start is becoming increasingly important in today's economy and in response to the growing numbers of applicants. Beyond cognitive tests of ability, what other attributes should selectors be considering to know whether an individual has the talent and the capability to perform as well as the mental and psychological drive to succeed? Measuring Human Capabilities: An Agenda for Basic Research on the Assessment of Individual and Group Performance Potential for Military Accession examines promising emerging theoretical, technological, and statistical advances that could provide

scientifically valid new approaches and measurement capabilities to assess human capability. This report considers the basic research necessary to maximize the efficiency, accuracy, and effective use of human capability measures in the military's selection and initial occupational assignment process. The research recommendations of Measuring Human Capabilities will identify ways to supplement the Army's enlisted soldier accession system with additional predictors of individual and collective performance. Although the primary audience for this report is the U.S. military, this book will be of interest to researchers of psychometrics, personnel selection and testing, team dynamics, cognitive ability, and measurement methods and technologies. Professionals interested in of the foundational science behind academic testing, job selection, and human resources management will also find this report of interest.

Illustrated with 10 images. This book will be a descriptive grammar of the Esperanto language invented by L. L. Zamenhof, which will be complete and comprehensive in regards to a) the grammar of Esperanto as first outlined by Zamenhof in Fundamento de Esperanto and other foundational documents, and b) Esperanto as it is spoken today by the most committed Esperantists. (Proposed reforms to the Esperanto language will be discussed if they have serious support from a significant fraction of Esperanto enthusiasts). This book was started practically on a dare from the August 2006 issue of Bob's Poetry Magazine, in which Robert Happelberg boasted that he could print a complete and comprehensive grammar of Esperanto in just one 6 by 7 inch page. While this is obviously wrong, it's not too far off the mark. When completed, this book will require several standard size (8.5 by 11 in the USA) pages, but will still be much shorter than a complete grammar of a natural language like English or Slovene. In view of this goal, the number of examples provided for each concept will be kept to a bare minimum. Those wishing to build their Esperanto vocabularies are also referred to the Esperanto textbooks. It is acceptable in the beginning to word the text in an accessible manner like in a textbook, but the goal should be for all the text to be technical with a full command of linguistic jargon.

"This assessment was prepared by the Environmental Effects Assessment Panel for the Parties to the Montreal Protocol."--P. v.

Discover how high-performing systems shape teaching quality around the world Producing highly skilled and committed teachers is not the work of a single innovative school or the aggregation of heroic

individuals who succeed against the odds. In high-performing countries, the opportunities for teachers to learn sophisticated practices and continue to improve are embedded systemically in education policies and practices. Empowered Educators describes how this seemingly magical work is done—how a number of forward-thinking educational systems create a coherent set of policies designed to ensure quality teaching in all communities. . . and how the results are manifested in practice. Spanning three continents and five countries, Empowered Educators examines seven jurisdictions that have worked to develop comprehensive teaching policy systems: Singapore and Finland, the states of New South Wales and Victoria in Australia, the provinces of Alberta and Ontario in Canada, and the province of Shanghai in China. Renowned education expert Linda Darling-Hammond and a team of esteemed scholars offer lessons learned in a number of areas that shape the teaching force and the work of teachers, shedding unprecedented light on areas such as teacher recruitment, preparation, induction and mentoring, professional learning, career and leadership development, and more. Find out how quality teaching is developed and conducted across the globe Discover a common set of strategies for developing, supporting, and sustaining the ongoing learning and development of teachers and school leaders See how high-performing countries successfully recruit and train educators Understand why the sharing of expertise among teachers and administrators within and across schools is beneficial A fascinating read for researchers, policymakers, administrators, teacher educators, pre-service teachers and leaders, and anyone with an interest in education, this book offers a rare glimpse into the systems that are shaping quality teaching around the world.

These monograph of 74 food and fruit-bearing forest species were prepared under the auspices of FAO, by the INPA (Manaus, Brazil). Besides botanical and vernacular (South America and Caribbean) nomenclature and detailed descriptions, the illustrated monographs provide information, where possible, on the ecology, distribution, nutritional value and main uses of the species described.

This book provides an overview of passive and interactive analytical techniques for nuclear materials. The book aims to update readers on new techniques available and provide an introduction for those who are new to the topic or are looking to move into actinides and nuclear materials science. The characterization of actinide species and radioactive materials is vital for understanding how these elements and radioactive isotopes are formed and behave and how these materials can be improved. The analysis of the actinides or radioactive materials goes beyond spent fuel science to the applicable complete fuel cycle and including analysis of reactor materials.
