It is challenging to know when customers are satisfied or dissatisfied with a product or service. Feedback mechanisms such as surveys are frequently used to gain feedback and evaluate the customer's perceptions of the product or service. John Deere, like most companies, takes an active role in understanding customer satisfaction, using surveys and feedback through field teams and the dealer channel. Shortcomings with this method include the need for customers to voice their complaints first, which can take a significant amount of time, delaying John Deere from providing needed service. The purpose of this research is to examine the usefulness of using primary diagnostic data collected by John Deere to assess customer satisfaction. Specifically, to examine if the number of diagnostic trouble codes (DTCs) on a John Deere 8R series row crop tractor experiences has an impact on customer satisfaction scores reported on surveys. Then determine if this data would be useful to help identify dissatisfied customers proactively. Statistical analysis and regression were used to understand the impact DTC's have on customer satisfaction. Analysis indicates that for every 100 Total DTC's a machine exhibits one could expect to see a 4 point reduction in overall CSI score by the customer. This information may prove valuable in being able to understand customer satisfaction more proactively.

In this compelling examination of the intersection of smart technology and the law, Joshua A. T. Fairfield explains the crisis of digital ownership - how and why we no longer control our smartphones or software-enable devices, which are effectively owned by software and content companies. In two years we will not own our 'smart' televisions which will also be used by advertisers to listen in to our living rooms. In the coming decade, if we do not take back our ownership rights, the same will be said of our self-driving cars and software-enabled homes. We risk becoming digital peasants, owned by software and advertising companies, not to mention overreaching governments. Owned should be read by anyone wanting to know more about the loss of our property rights, the implications for our privacy rights and how we can regain control of both.

Retired Navy SEAL and New York Times bestselling author Jason Redman divulges how to triumph over adversity using proven Special Operations habits and mindsets. Adversity can often catch you by surprise and leave you struggling with what to do next. What if you could confront any adversity, from the biggest challenges -- the loss of your job, divorce, health issues, bankruptcy -- to normal daily challenges -- a late flight, a disappointing phone call, a missed promotion, a bad day -- and not just survive it, but thrive afterwards? Redman was horrifically wounded in Iraq in 2007 when he was shot at close range through the face and arm. After 40 surgeries, including extensive facial reconstruction and skin grafts, he came back from this experience stronger than ever -- despite carrying scars and injuries he will have for the rest of his life. Redman went on to launch two successful companies and speaks all over the country on how to build better leaders through his Overcome mindset. Overcome is based on extensive research and interviews with America's toughest warriors, including retired 4-star Admiral William McRaven, retired Navy SEAL Jocko Willink, retired 4-star General Stanley McChrystal, and others. In this book, Redman teaches: How to survive any life ambush How to move from defense to offense using the proactive techniques of SEAL teams How to strengthen your endurance during long-term trials How to rediscover and thrive in your life purpose How to lead your team (whether in business or family) to success How to compete with the top 1% in your field How to stay the course even when you want to quit And more Some people move through adversity and others fall underneath it. Learn how you can be counted among those who will Overcome.
