Disability is both a cause and consequence of poverty. Eliminating world poverty is unlikely to be achieved unless the rights and needs of people with disabilities are taken into account. According to the United Nations, one person in 20 has a disability. More than three out of four of these live in a developing country.

~~Disability, poverty and development.~~

they experience poverty, and the depth of poverty encountered. Some research has shown that experiencing poverty during early years more accurately predicts one's future levels of academic achievement and educational attainment than experiencing poverty during later stages of development (3, 11, 19-22) even when allowing for

The urgency of reducing poverty in the developing world has been the subject of a public campaign by such unlikely policy experts as George Clooney, Alicia Keyes, Elton John, Angelina Jolie, and Bono. And yet accompanying the call for more foreign aid is an almost universal discontent with the effectiveness of the existing aid system. In Reinventing Foreign Aid, development expert William Easterly has gathered top scholars in the field to discuss how to improve foreign aid. These authors, Easterly points out, are not claiming that their ideas will (to invoke a current slogan) Make Poverty History. Rather, they take on specific problems and propose some hard-headed solutions. Easterly himself, in an expansive and impassioned introductory chapter, makes a case for the "searchers"—who explore solutions by trial and error and learn from feedback—over the "planners"—who throw an endless supply of resources at a big goal—as the most likely to reduce poverty. Other writers look at scientific evaluation of aid projects (including randomized trials) and describe projects found to be cost-effective, including vaccine delivery and HIV education; consider how to deal with the government of the recipient state (work through it or bypass a possibly dysfunctional government?); examine the roles of the International Monetary Fund (a de facto aid provider) and the World Bank; and analyze some new and innovative proposals for distributing aid. Contributors: Abhijit Banerjee, Nancy Birdsall, Craig Burnside, Esther Duflo, Domenico Fanizza, William Easterly, Ruimin He, Kurt Hoffman, Stephen Knack, Michael Kremer, Mari Kuraishi, Ruth Levine, Bertin Martens, John McMillan, Edward Miguel, Jonathan Morduch, Todd Moss, Gunilla Pettersson, Lant Pritchett, Steven Radelet, Aminur Rahman, Ritva Reinikka, Jakob Svensson, Nicolas van de Walle, James Vreeland, Dennis Whittle, Michael Woolcock.

Edited proceedings of a colloquium held Apr. 24-25, 1987 in honor of Clement E. Vose, at Wesleyan University.

This major profile of global health maps the prevalence and causes of disease as well as the economic, social, and environmental factors that influence well-being.

Rehabilitation psychology is one of the fastest growing fields in applied psychology and involves the application of psychological knowledge and skills to the understanding and treatment of individuals with physical disabilities. Rehabilitation psychologists aim to optimize outcomes in terms of health, independence, and daily functioning while also minimizing secondary health problems. The Oxford Handbook of Rehabilitation Psychology provides background and overview of the associated psychological processes and types of interventions that are critical in managing the consequences of disability and chronic disease. Psychological models and research have much to contribute to those working with the physical disabilities; this volume has a broad cognitive behavioral focus within the general banner of the biopsychosocial framework. The editor has successfully brought together contributions from a range of well-established and experienced researchers and practitioners from a wide variety of clinical and academic contexts. They highlight the critical psychological aspects, review applied interventions, and consider the wider conceptual, clinical and professional themes associated with disability and society.

This accessible and enaging work introduces current and future teachers, child care providers, and others interested in early childhood education to the importance for the early years in children's well-being and success. It summarizes their research on the value of high-quality services for young children, families, and society, showing why early education matters both today and into the future. Emphasizing the need to understand and respect young children's strengths and unique characteristics, the authors offer inspiration for working in the field, as well as addressing the realistic challenges of implementing developmentally appropriate care and education.

The author examines the moral, methodological, and practical problems that arise from poverty measurement. He establishes a methodological framework for analyzing poverty conceptions and measures, and concludes with concrete recommendations regarding both the procedures for and substance of future global poverty measurement.

Please see Volume I for a full description and table of contents for all four volumes.
