(PDF) Barriers and drivers to sustainable business model ... Business model innovation. As mentioned earlier, management's ability to develop and refine business models is a core microfoundation of dynamic capabilities (Teece, 2007). This is just as true for designing the original model as it is for replacing and recombining elements of the model over time.

Business models and dynamic capabilities - ScienceDirect
Enterprise modelling is the abstract representation, description and definition of the structure, processes, information and resources of an identifiable business, government body, or other large organization. It deals with the process of understanding an organization and improving its performance through creation and analysis of enterprise models. This includes the modelling of the relevant business domain, business processes, and uses of information technology within the business domain and it

Dynamic Enterprise Modeling Baan

The business model is proposing five main business model components, illustrating the necessity of understanding the dynamic interrelation between the diverse components. The RCOV framework focuses on value creation and value capture through the virtuous circle in the middle.

In the ever changing scientific word, Academic entrepreneurship has emerged as a new and growing field. Referring to the creation and

Online Library Dynamic Enterprise Modeling Innovate Business Baan

management of an environment for active support of knowledge exploitation and transfer, Academic entrepreneurship aims to encourage entrepreneurial behavior in the academic community. Academic Entrepreneurship and Technological Innovation: A Business Management Perspective provides a wide-ranging overview of the relationship between universities and organizations through the most recent and detailed research on university entrepreneurship. This book aims to be a reference source for students, researchers, and practitioners interested in the academic industry's demand for technological innovation.

The National Science Foundation (NSF) is the leading sponsor of basic academic research in engineering, and its influence far exceeds its budget. We think NSF is at its best when it uses that influence to focus interest within the researcher community on critical new challenges and technologies. NSF's Scalable Enterprise Systems (SES) initiative, for which we were responsible in our successive terms in the division of Design, Manufacture and Industrial Innovation (DMII), was just such a venture. A collaborative effort spanning NSF's engineering and computer science directorates, SES sought to concentrate the energies of the academic engineering research community on developing a science base for designing, planning and controlling the extended, spatially and managerially distributed enterprises that have become the norm in the manufacture, distribution and sale of the products of U. S. industry. The of associated issues addressed included everything from management supply chains, to product design across teams of collaborating companies, to e-marketing and make-to-order manufacturing, to the information technology challenges of devising inter-operable planning and control tools that can scale with exploding enterprise size and scope. A total of 27 teams with nearly 100 investigators were selected from the 89 submitted proposals in the Phase I, exploratory part of the effort (see the list below). Seven of these were awarded larger multi-year grants to continue their research in Phase II. As the contents of this book amply illustrate, these

Online Library Dynamic Enterprise Modeling Innovate Business Baan

investigations continue to flourish, with and without direct NSF support.

The misconduct of various companies directs both practitioners and academics towards the necessity for a requisitely holistic approach to governance and management. As such, there is a current focus for researchers and practitioners on contemporary solutions for governance and management in this sense. Such efforts have led to the development of integral management and governance, meaning that the process of management and governance in a certain company has to be integrated and consistent with culture, credibility, entrepreneurial spirit, ecology, ethics, innovation, and social responsibility.

Consequently, in the process of a company ' s management and governance, the key stakeholders have to achieve the (corporate) integrity of their company ' s functioning. The integrity of such a company ' s functioning is currently treated as the precondition for a company ' s success in the long run. This volume explores such issues in the broader context of the MER Model of Integral Management and Governance, which is based on the multi-layered integration of governance and management with an enterprise and its environment, considering the fundamental aspirations for the enterprise ' s existence and, thus, its quantitative, as well as qualitative, changes.

This volume examines the organisational dimension of business model innovation. Drawing on organisational theory and empirical observation, the contributors specifically highlight organisational design aspects of business model innovation, focusing on how reward systems, power distributions, routines and standard operating procedures, the allocation of authority, and other aspects of organisational structure and control should be designed to support the business model the firm chooses.

This handbook is about methods, tools and examples of how to architect an enterprise through considering all life cycle aspects of

Online Library Dynamic Enterprise Modeling Innovate Business Baan

Enterprise Entities. It is based on ISO15704:2000, or the GERAM Framework. A wide audience is addressed, as the handbook covers methods and tools necessary to design or redesign enterprises, as well as those necessary to structure the implementation into manageable projects.

Food chain management research can help in the analysis and redesign of value creation and the product flow throughout the chain from primary producer down to the consumer. The aim is to meet consumer and societal requirements effectively at minimal cost. In the Wageningen UR strategic research program, Agrologistics and Supply Chains (2005-2009), a large number of Wageningen UR research institutes were involved in multi-disciplinary and applied research projects in order to shed light on diverse food supply chain management challenges such as, design of chain strategies, collaboration efficiencies between chain partners, management of risks in chains, innovative modeling concepts and application of information technologies. This book presents the results of this program. It offers a diverse disciplinary spectrum on food supply chains and it's challenges in 15 chapters. It contributes considerably to the advancement of our knowledge on management and control of food supply chains.

The topic of Enterprise Information Systems (EIS) is having an increasingly relevant strategic impact on global business and the world economy, and organizations are undergoing hard investments in search of the rewarding benefits of efficiency and effectiveness that these ranges of solutions promise. Organizational Integration of Enterprise Systems and Resources: Advancements and Applications show that EIS are at the same time responsible for tremendous gains in some companies and tremendous losses in others. Therefore, their adoption should be carefully planned and managed. This title highlights new ways to identify opportunities and overtake trends and challenges of EIS selection, adoption, and exploitation as it is filled with

Online Library Dynamic Enterprise Modeling Innovate Business Baan

models, solutions, tools, and case studies. The book provides researchers, scholars, and professionals with some of the most advanced research, solutions, and discussions of Enterprise Information Systems design, implementation, and management.

This study adopts a dynamic capabilities perspective to explore the activities and processes through which business model innovations arise in established organisations. New and innovative business models are fundamental to the commercialisation of the latest technologies, performance, and competitive advantage, as well as value creation for customers, the focal company and its ecosystem. Yet, our current understanding of how established companies design and implement new business models is limited by a lack of empirical research. Based on a review of relevant literature, business model innovation is presented and explored as a dynamic capability. The book subsequently uses proven methodologies to gather and analyse data from five case studies in the manufacturing, financial services, media, consulting, and healthcare industries. The framework developed here offers a novel understanding of how business model innovations come about in established organisations, a practice it dubs 'crafting business models in statu nascendi'.

Collaborative Networks A Tool for Promoting Co-creation and Innovation The collaborative networks paradigm offers powerful socio-organizational mechanisms, supported by advanced information and communication technologies for promoting innovation. This, in turn, leads to new products and services, growth of better customer relationships, establishing better project and process management, and building higher-performing consortia. By putting diverse entities that bring different perspectives, competencies, practices, and cultures, to work together, collaborative networks develop the right environment for the emergence of new ideas and more efficient, yet practical, solutions. This aspect is particularly important for small and medium enterprises which typically lack critical mass and can greatly benefit

Online Library Dynamic Enterprise Modeling Innovate Business Baan

from participation in co-innovation networks. However, larger organizations also benefit from the challenges and the diversity found in collaborative ecosystems. In terms of research, in addition to the trend identified in previous years toward a sounder consolidation of the theoretical foundation in this discipline, there is now a direction of developments more focused on modeling and reasoning about new collaboration patterns and their contribution to value creation. “ Soft issues, ” including social capital, cultural aspects, ethics and value systems, trust, emotions, behavior, etc. continue to deserve particular attention in terms of modeling and reasoning. Exploitation of new application domains such as health care, education, and active aging for retired professionals also help identify new research challenges, both in terms of modeling and ICT support development.

"This book provides inter-organizational aspects in business integration including managerial and organizational integration, social integration, and technology integration, along with the resources to accomplish this competitive advantage"--Provided by publisher.
