This student-friendly text on the current Page 33/58

economic issues particular to engineering covers the topics needed to analyze engineering alternatives. Students use both hand-worked and spreadsheet solutions of examples, problems and case studies. In this edition the options have been increased with an expanded spreadsheet analysis component, Page 34/58

twice the number of case studies, and virtually all new end-ofchapter problems. The chapters on factor derivation and usage, cost estimation. replacement studies, and after-tax evaluation have been heavily revised. New material is included on public sector projects and cost estimation. A reordering Page 35/58

of chapters puts the fundamental topics up front in the text. Many chapters include a special set of problems that prepare the students for the Fundamentals of Engineering (FE) exam. This text provides students and practicing professionals with a solid preparation in the financial understanding of engineering problems
Page 36/58

and projects, as well as the techniques needed for evaluating and making sound economic decisions. Distinguishing characteristics include learning objectives for each chapter, an easy-toread writing style, many solved examples, integrated spreadsheets, and case studies throughout the text. Page 37/58

Graphical crossreferencing between topics and quick-solve spreadsheet solutions are indicated in the margin throughout the text. While the chapters are progressive, over three-quarters can stand alone, allowing instructors flexibility for meeting course needs. A complete online learning center (OLC) Page 38/58

offers supplemental practice problems, spreadsheet exercises, and review questions for the the Fundamentals of Engineering (FE) exam.

This text covers the basic techniques and applications of engineering economy for all disciplines in the engineering profession. The writing style Page 39/58

emphasizes brief, crisp coverage of the anual principle or technique discussed in order to reduce the time taken to present and grasp the essentials. The objective of the text is to explain and demonstrate the principles and techniques of engineering economic analysis as applied in different fields of Page 40/58

engineering. This brief text includes coverage of multiple attribute evaluation for instructors who want to include non-economic dimensions in alternative evaluation and the discussion of risk considerations in the appendix, compared to Blank's comprehensive text, where these topics are Page 41/58

discussed in two unique chapters. Manual

Designed as a textbook for undergraduate students in various engineering disciplines— Mechanical, Civil. Industrial Engineering, **Electronics Engineer**ing and Computer Science—and for postgraduate students in **Industrial Engineering** Page 42/58

and Water Resource Management, this comprehensive and wellorganized book, now in its Second Edition. shows how complex economic decisions can be made from a number of given alternatives. It provides the managers not only a sound basis but also a clear-cut approach to making decisions. These Page 43/58

decisions will ultimately result in minimizing costs and/or maximizing benefits. What is more, the book adequately illustrates the concepts with numerical problems and Indian cases. While retaining all the chapters of the previous edition, the book adds a number of topics to make it more comprehensive and Page 44/58

more student friendly. What's New to This Edition • Discusses different types of costs such as average cost, recurring cost, and life cycle cost. • Deals with different types of cost estimating models, index numbers and capital allowance. • Covers the basics of nondeterministic decision making. • Page 45/58

Describes the meaning of cash flows with probability distributions and decision making, and selection of alternatives using simulation. • Discusses the basic concepts of Accounting. This book, which is profusely illustrated with workedout examples and a number of diagrams and tables, should prove Page 46/58

extremely useful not only as a text but also as a reference for those offering courses in such areas as Project Management, Production Management, and Financial Management.

to focus on important concepts, terms, anual equations and decision guidelines. There are new features, new topics (such as ethics and staged decision making), and new online tools; yet no compromise on coverage, examples, or the well-accepted writing style of this popular text. Solved Page 48/58

examples, problems and case studies target many of the current engineering challenges in areas such as energy, ethics, the environment, and the world's changing economics. McGraw-Hill Education's Connect, is also available as an optional, add on item. Connect is the only integrated learning Page 49/58

system that empowers students by Manual continuously adapting to deliver precisely what they need, when they need it, how they need it, so that class time is more effective. Connect. allows the professor to assign homework, quizzes, and tests easily and automatically grades and records the scores of the student's Page 50/58

work. Problems are randomized to prevent sharing of answers an may also have a "multistep solution" which helps move the students' learning along if they experience difficulty.

Transport Modeling for **Environmental** Engineers and Scientists, Second Edition, builds on integrated transport courses in chemical engineering curricula, demonstrating the underlying unity of mass and momentum transport processes. It describes how these Page 57/58

processes underlie the mechanics common to both pollutant transport and pollution control processes.
