Can we trust our senses to tell us the truth? Challenging leading scientific theories that claim that our senses report back objective reality, cognitive scientist Donald Hoffman argues that while we should take our perceptions seriously, we should not take them literally. How can it be possible that the world we see is not objective reality? And how can our senses be useful if they are not communicating the truth? Hoffman grapples with these questions and more over the course of this eye-opening work. Parivartana Yogas are said to be among the most powerful of planetary combinations, having the capacity to link the effects of two astrological houses in a chart. However, aside from what we find explicitly in Mantreswara's Phala Deepika, there's little in the literature - neither in the many classics of Jyotisha, nor in modern books - to help us understand these yogas. In this book, an invaluable reference work for any Vedic astrologer's library, the author describes the effects for each of the 66
