This text provides a comprehensive analysis of contemporary macroeconomics, within a European and global context. The authors balance the theoretical aspects with up-to-date policy examples throughout, allowing the reader to relate the concepts to their own economic environment.

The Eurozone crisis which started in spring 2010 as a Greek budget crisis has alerted Europeans that the issue of defaulting sovereigns is not one reserved just for the poor and poorest countries on this globe. The crisis painfully amplified that developed countries, too, might be hit by this phenomenon. To be sure, this insight is far from novel - the history of defaulting states reaches back into history for at least two millennia. And yet, lawyers have surprisingly abstained more or less completely from discussing this subject and developing possible solutions. Beginning with the Argentina crisis in 2001, this neglect began to vanish to a certain degree and this movement got some momentum in 2010 by the Eurozone crisis. The present book collects contributions from authors most of whom have participated in a conference on this issue in January 2012 at the Humboldt-Universit ä t zu Berlin. The presentations, thus, provide a unique overview of the present discussion both from an economic and legal perspective.

Pope Paul VI's notion of "integral human development," which was endorsed by his successors including Pope Francis, broke with the modern project of purely economic and technological development, resulting in an original understanding of development. Like a conventional notion of development, this theoretical construct favors economic growth, technological innovation, and the implementation of social programs. However, development is not just a socioeconomic and political issue, let alone a technical one; it raises, fundamentally, theological questions and points to important ethical challenges. Hence, integral human development is a vocation at which all personal, social, and political activity must be directed. As such, it is not a social but an anthropological program. Far from being a secular development theory, the notion of "integral human development" emphasizes the religious goal of reconciling humanity and God through the creation of a human family over and above material social and economic issues. Sustained by global principle and shaped by different cultural views, this book brings forth the uniqueness of this approach to development, examines its contribution to human welfare, and anticipates the resistances it may face.

EBOOK The Economics of European Integration 6e

IS-LM is perhaps the prime example of 'cognitive dissonance' in economics, and is problematic to many economists. On the one hand, the IS-LM model is still taught by many academic economists or they use it to derive the AD-AS approach. On the other hand, the same economists realize the limitations of the basic IS-LM model and would not now use it for policy analysis, as they did in the past. The distinction between pedagogical and analytical efficacy is made by all the authors in this volume regarding the IS-LM model. Indeed, even those who would reject using the model for modern policy analysis still see the basic model as useful for teaching purposes. Moreover, in an augmented form, some of the authors in this volume would even see fit to use IS-LM for modern policy analysis. As will be seen, therefore, the IS-LM model is 'not yet dead'. Rather, the model's 'plasticity' has enabled it to undergo a metamorphosis into augmented form, enabling its continuing utilization in economics accordingly.

Revised and updated for the 2nd edition, this textbook guides the reader towards various aspects of growth and international trade in a Diamond-type overlapping generations framework. Using the same model type throughout the book, timely topics such as growth with bubbles, robots and involuntary unemployment, financial integration and house price dynamics, policies to mitigate climate change and the persistence of religion in a globalized market economy are explored. The first part starts from the "old" growth theory and bridges to the "new" growth theory (including R&D and human capital approaches). The second part presents an intertemporal equilibrium theory of inter- and intra-sectoral trade, investigates innovation, growth and trade and limits to public debt as well as nationally and internationally optimal climate policies. The debt dynamics of the Euro Zone and the origins of intra-EMU and Asian-US trade imbalances are also explored. The book is primarily addressed to upper undergraduate and graduate students wishing to proceed to the analytically more demanding journal literature.

The ode al-Kawakib al-Durriyya fi Madh Khayr al-Bariyya ('Celestial Lights in Praise of the Best of Creation') - more famously known as the 'qasidat al-burda' ('Ode of the Prophetic Mantle') by the famed 13th century Mamluk satirical poet turned Sufi Sharaf al-Din al-Busiri (d.695/1296) - is perhaps the most exceptional poem in Islamic history. It inspired hundreds of commentaries, is translated into dozens of languages and is held in extreme reverence by Muslims all over the world. One commentary that is broad, lucid and early is that of the Damascene Shafi'ite jurist and social critic Abu Shama (d.665/1268). Major portions of Section 3 which is the madh (eulogy) segment of that commentary is translated here for the first time with an extensive introduction to the Burda, the lives of both author and commentator as well as additional notes to help guide the reader. It is hoped this small work will add to the growing literature in English on the emerging genre of 'Burda Studies'.

Macroeconomics teaches students to be young economists, providing a contemporary approach to the subject and a wealth of real-life case studies to allow students to understand how economics works in practice. Responding to the financial crisis, this text explains the modern approach to macroeconomics with simplicity and rigour, while retaining the focus on particular characteristics of the European economy. The authors analyse different theoretical approaches and contextualise theory with up-to-date monetary policy examples. Helpful learning features throughout the text including: boxes, chapter summaries, key concepts, end of chapter exercises, and essay questions, support students' learning, and the book is accompanied by an extensive Online Resource Centre designed to help students take their learning further. Online Resource Centre: Student Resources: Sample exam questions Multiple choice questions Review questions Web appendices Web links Lecturer Resources: Power Point slides Excel based exercises for macroeconomic modelling Lecture plans Case studies Revision questions Solutions to end-of-chapter exercises Test bank VLE cartridge

Since the publication of the Institute of Medicine (IOM) report Clinical Practice Guidelines We Can Trust in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.

Bridging the theory and practice of monetary policy, this book presents aspects of the New-Keynesian theory of monetary policy and its implications for the practical decision-making of central bankers. It also outlines important lessons for policymakers.
