updated his time-proven swing trading technique to help you succeed in an environment vastly transformed by volatility and technology. Universally acclaimed for its sophisticated yet easy-to-execute methods, this practical, results-driven guide provides everything you need to make a lucrative career as a day trader—from preparing yourself psychologically for the unique demands of day trading to timing the market, managing risk, and planning future trades. Mastering the Trade sets aside timeworn basics and rehashed ideas to examine in detail the underlying factors that cause prices to move. Providing the tools you need to make the right decisions at the right times, it helps you enter market shifts early and either pull out before losses accrue or hang on for a long and refreshingly predictable ride. Mastering the Trade covers: The five psychological truths that will transform you from a mistake-prone novice into a savvy trading professional Exact entry, exit, and stop-loss levels for the intraday trading of stocks, options, ETFs, e-mini futures, 30-year bonds, currencies, and more Seven key internals, from \$TICKS to five-minute volume-critical for gauging pending market direction from the opening bell Premarket checklists for analyzing recent market behavior and calculating on each trading day what you plan to do, how you plan to do it, and why Airtight risk control techniques for protecting trading capital—the most important component of a professional trading career After spending many years on various trading desks, Carter has developed an intuitive understanding of how the markets work. In Mastering the Trade, he gives you unlimited access to everything the markets have taught him—so you can make an exceptional living on the frontlines of professional trading.

This book presents two stories: one of a man creating that elusive American second act, and secondly finding the perfect collaborator in his wife.

The work-family conflict that mothers experience today is a national crisis. Women struggle to balance breadwinning with the bulk of parenting, and social policies aren't helping. Of all Western industrialized countries, the United States ranks dead last for supportive work-family policies. Can American women look to Europe for solutions? Making Motherhood Work draws on interviews that Caitlyn Collins conducted over five years with 135 middle-class working mothers in Sweden, Germany, Italy, and the United States. She explores how women navigate work and family given the different policy supports available in each country. Taking readers into women's homes, neighborhoods, and workplaces, Collins shows that mothers' expectations depend on context and that policies alone cannot solve women's struggles. With women held to unrealistic standards, the best solutions demand that we redefine motherhood, work, and family.

Here, the authors propose a method for the formal development of parallel programs - or multiprograms as they prefer to call them. They accomplish this with a minimum of formal gear, i.e. with the predicate

calculus and the well-established theory of Owicki and Gries. They show that the Owicki/Gries theory can be effectively put to work for the formal development of multiprograms, regardless of whether these algorithms are distributed or not.

An intimate and inspiring memoir and call to action from Pat Mitchell -- groundbreaking media icon, global advocate for women's rights, and co-founder and curator of TEDWomen Pat Mitchell is a serial ceiling smasher. The first woman to own and host a nationally syndicated daily talk show, and the first female president of CNN productions and PBS, Mitchell has been lauded as a powerful changemaker and a relentless advocate for women and girls. In *Becoming a Dangerous Woman*, Mitchell shares her own path to power, from a childhood spent on a cotton farm in the South to her unprecedented rise in media and global affairs. Full of intimate, fascinating stories, such as an encounter with Fidel Castro while wearing a swimsuit, and traveling to war zones with Eve Ensler and Glenn, *Becoming a Dangerous Woman* is an inspiring call to arms for women who are ready to dismantle the barriers they see in their own lives.

What happens to rural communities when their traditional economic base collapses? When new money comes in, who gets left behind? *Pushed Out* offers a rich portrait of Dover, Idaho, whose transformation from "thriving timber mill town" to "economically depressed small town" to "trendy second-home location" over the past four decades embodies the story and challenges of many other rural communities. Sociologist Ryanne Pilgeram explores the structural forces driving rural gentrification and examines how social and environmental inequality are written onto these landscapes. Based on in-depth interviews and archival data, she grounds this highly readable ethnography in a long view of the region that takes account of geological history, settler colonialism, and histories of power and exploitation within capitalism. Pilgeram's analysis reveals the processes and mechanisms that make such communities vulnerable to gentrification and points the way to a radical justice that prioritizes the economic, social, and environmental sustainability necessary to restore these communities.

This Festschrift volume has been published in honor of Cristian Calude on the occasion of his 60th birthday and contains contributions from invited speakers and regular papers presented at the International Workshop on Theoretical Computer Science, WTCS 2012, held in Auckland, New Zealand, in February 2012. Cristian Calude has made a significant contribution to research in computer science theory. Along with early work by Chaitin, Kučera, Kurtz, Solovay, and Terwijn his papers published in the mid-1990s jointly with Khossainov, Hertling, and Wang laid the foundation for the development of modern theory of algorithmic randomness. His work was essential for establishing the leading role of New Zealand in this area. The research interests of Cristian Calude are reflected in the topics covered by the 32 papers included in this book, namely: algorithmic information theory,

algorithms, automata and formal languages, computing and natural sciences, computability and applications, logic and applications, philosophy of computation, physics and computation, and unconventional models of computation. They have been organized into four parts. The first part consists of papers discussing his life achievements. This is followed by papers in the three general areas of complexity, computability, and randomness; physics, philosophy (and logic), and computation; and algorithms, automata, and formal models (including unconventional computing).

A comprehensive examination into the frightening true crime history of serial homicide—including information on America's most prolific serial killers such as: Ted Bundy • “Co-ed Killer” Ed Kemper • The BTK Killer • “Highway Stalker” Henry Lee Lucas • Monte Ralph Rissell • “Shoe Fetish Slayer” Jerry Brudos • “Night Stalker” Richard Ramirez • “Unabomber” Ted Kaczynski • Ed Gein “The Butcher of Plainfield” • “Killer Clown” John Wayne Gacy • Andrew Cunanan • And more... In this unique book, Peter Vronsky documents the psychological, investigative, and cultural aspects of serial murder, beginning with its first recorded instance in Ancient Rome through fifteenth-century France on to such notorious contemporary cases as cannibal/necrophile Ed Kemper, the BTK killer, Henry Lee Lucas, Monte Ralph Rissell, Jerry Brudos, Richard Ramirez, “Unabomber” Ted Kaczynski, Ed Gein, John Wayne Gacy, Ted Bundy, and the emergence of what he classifies as the “serial rampage killer” such as Andrew Cunanan, who murdered fashion designer Gianni Versace. Vronsky not only offers sound theories on what makes a serial killer but also makes concrete suggestions on how to survive an encounter with one—from recognizing verbal warning signs to physical confrontational resistance. Exhaustively researched with transcripts of interviews with killers, and featuring up-to-date information on the apprehension and conviction of the Green River killer and the Beltway Snipers, Vronsky's one-of-a-kind book covers every conceivable aspect of an endlessly riveting true crime phenomenon. What is this book about? PHP, Apache, and MySQL are the three key open source technologies that form the basis for most active Web servers. This book takes you step-by-step through understanding each — using it and combining it with the other two on both Linux and Windows servers. This book guides you through creating your own sites using the open source AMP model. You discover how to install PHP, Apache, and MySQL. Then you create PHP Web pages, including database management and security. Finally, you discover how to integrate your work with e-commerce and other technologies. By building different types of Web sites, you progress from setting up simple database tables to tapping the full potential of PHP, Apache, and MySQL. When you're finished, you will be able to create well-designed, dynamic Web sites using open source tools. What does this book cover? Here's what you will learn from this book: How PHP server-side scripting language works for connecting HTML-based Web pages to a backend database Syntax,
