Designing a museum involves not only conceiving the best way to reveal their collections, but also how to welcome and serve visitors, and how to incorporate the spaces needed for the behind-the-scenes work of curating, restoring, cataloguing and storing. The architects embarking on such a project must carry out in-depth studies and find innovative solutions, whether their mission is to inject new life into a historic museum, to integrate a modern museography, to combine and harmonise an old building with a contemporary space, or to create from scratch a museum that will be acclaimed by critics and the public alike. French Museum Architecture explores these different problematic through forty museum

projects, ranging from the Orsay and Quai Branly museums in Paris, to the Lille Museum of Modern Art (LaM) and the Confluences Museum in Lyon, to name but a few. Each project is presented with the emphasis on the thought process behind the creation, exposing the main questions the architects had to address in order to come up with spaces that are efficient, intelligent, welcoming and dynamic, able to fulfil the expectations of a public ranging from academic researchers to the merely curious, and everyone in between.

education of engineers is set in the context of engineering practice, that is, Conceiving, Designing, Implementing, and Operating (CDIO) through the entire lifecycle of engineering processes, products, and systems. The book is both a description of the development and implementation of the CDIO model and a guide to engineering programs worldwide that seek to improve the education of young engineers.

The author and every male member of his immediate family served in the Vietnam war. In 1988, his older brother, Elmo, died from Agent Orange-related cancers linked to his service as a Swift Boat commander during the Vietnam war. In a bitter irony, it was the actions of his father, Admiral Elmo R. Zumwalt, Jr., in ordering the spraying of Agent Orange when he commanded all US naval forces in Vietnam that sealed his brother's fate. People react differently to

grief. For the author, it turned to animosity, directed against not only the war but also the enemy against whom we had fought. In 1994, traveling to Vietnam for the first time since the war, he met with Vietnamese leaders to discuss the Agent Orange issue. In doing so, it provided him with the opportunity to learn about the conflict from the perspective of those who had fought it on the other side of the battlefield. As these former enemy veterans began sharing their personal stories of hardship and tragedy-one of which was not too dissimilar from the author's own-he was struck by a stark realization. As difficult and tragic as the war had been for Americans who served, it had taken as much, if not greater, a toll on the Vietnamese. In war, there are never winners-and Vietnam was no exception. Returning to Vietnam more than 50 times to interview hundreds of North Vietnamese Army (NVA) and Viet Cong (VC) veterans, in

In addition to Vietnamese civilians, the author obtained a better understanding as to the extent of our former enemy's suffering during that war. The result was a metamorphosis, which changed his attitude towards a former foe. "Bare Feet, Iron Will" became the vehicle by which he shares what this metamorphosis taught him. In "Bare Feet, Iron Will" are stories of intrigue, of patience, of ingenuity, of dedication and, most importantly, about a people with no option other than victory. These stories, share unique insights about the war. Intriguing insights evolving into odd coincidences-such as what led a Vietnamese veteran to write a novel, praised by Western critics, about the war; an interview where the author would learn the interviewee had tried to assassinate his father; the earlier-than-realized first American casualty of the Vietnam conflict and what that incident would portend for US involvement. Vietnam's allies-including China, a country with which Vietnam has fought in almost every century and how China sought at times to give the appearance of helping North Vietnam while not doing so and North Korea, which pressured to send pilots to fight the Americans, only to have Hanoi send the Koreans home, trying to hide their participation by burying North Korean pilots in an obscure cemetery. More than a generation after the war in Vietnam ended, many Americans are still haunted by its memory. More than thirty-four years after the fall of Saigon, it is time to better understand the enemy we fought and the role their "iron will" played. And with that understanding, hopefully many may find the healing they seek.

The Board Review Series (BRS) is aimed at providing basic knowledge as it relates to clinical situations and is used primarily by medical students studying for the United States Medical Licensing Examinations (USMLE). BRS Behavioral Science, Fifth Edition covers material on this subject that is addressed on USMLE Step 1, written in outline format to provide an efficient method of studying behavioral science for USMLE. The book includes at least 500 USMLE-style questions with accompanying annotated answers. An exam follows each chapter and a Comprehensive Exam is included at the end of the book. A companion Website will offer the fully searchable text and an interactive question bank.

Amid the national shame and subjugation

following World War I in France, cultural critics there—journalists, novelists, doctors, and legislators, among others—worked to rehabilitate what was perceived as an unhealthy social body. Carolyn J. Dean shows how these critics attempted to reconstruct the "bodily integrity" of the nation by pointing to the dangers of homosexuality and pornography. Dean's provocative work demonstrates the importance of this concept of bodily integrity in France and shows how it was ultimately used to define first-class citizenship. Dean presents fresh historical material—including novels and medical treatises—to show how fantasies about the body-violating qualities of homosexuality and pornography informed social perceptions and political action. Although she focuses on the period from 1890 to 1945, Dean also establishes the relevance of these ideas to current preoccupations with

This book offers the reader an overview of the basic approaches to the theoretical description of low-temperature plasmas, covering numerical methods, mathematical models and modeling techniques. The main methods of calculating the cross sections of plasma particle interaction and the solution of the kinetic Boltzmann equation for determining the transport coefficients of the plasma are also presented. The results of calculations of thermodynamic properties, transport coefficients, the equilibrium particle-interaction cross sections and two-temperature plasmas are also discussed. Later chapters consider applications, and the results of simulation and calculation of plasma parameters in induction and arc

plasma torches are presented. The complex physical processes in high-frequency plasmas and arc plasmas, the internal and external parameters of plasma torches, near-electrode processes, heat transfer, the flow of solid particles in plasmas and other phenomena are considered. The book is intended for professionals involved in the theoretical study of low-temperature plasmas and the design of plasma torches, and will be useful for advanced students in related areas.
