A Brilliant Idea Every 60 Seconds introduces a tested ideation and creative thinking methodology developed over the author's 36-year career as a creative communications professional and ideation expert. This methodology and the associated tools are being applied in personal lives and professional careers, helping people connect to their individual way of operating creatively. This how-to book on ideation focuses an individual's creative lens and makes the process of generating ideas highly tangible. It is not simply about techniques; it is also about understanding a context of personal, individual creativity, which allows individuals to more fully understand and embrace the Brilliant ideation techniques. Most importantly, it is about speed: generating ideas --- right now! The book is comprised of three components: Examining individual creativity: understanding the nature of your individual creative process: exploring how you think and operate creatively; understanding how others think and operate creatively; maximizing the way groups, teams and think tanks work together creatively and reach their creative potential; The ideation toolkit: understanding the nine Inherent Values (idea triggers) and how they work to generate Idea Strings and Actionable Ideas; the matrix of these Inherent Values makes the creative process and ideation tangible; Case studies: examining over 30 case studies ranging from advertising campaigns and live events to problem solving situations and innovative product development.

Ubiquitous information systems (UIS) are proposed to represent a fundamental paradigm shift in information systems research. Despite the advantages of such systems, they also come with disadvantages, such as their increasing automation and opaqueness. When aiming to develop UIS that are readily adopted and used by their intended users, those disadvantages need to be addressed. A promising approach to overcome this challenge is fostering the users' trust in UIS. Matthias Söllner presents a method for deriving trust supporting components for UIS, based on existing insights from literature as well as a new theoretical approach on the formation of trust in UIS. The empirical evaluation of the method shows that the trust supporting components increase the users' trust as well as their intention to adopt a UIS. The book targets researchers, lecturers and students in information systems, business administration and human computer interaction. It also provides insights for practitioners who develop UIS.
