This proceedings volume representing the second International Thermal Spray Conference (May 2004, Osaka, Japan) contains 232 papers and 93 poster presentations. Arrangement is in sections on applications, characterization methods for coating properties, coating technologies for vehicle engines, cold spray, consumables for thermal spraying, corrosion protection, economics and quality, HVOF processes and materials, innovative equipment and process technology, modeling and simulation, nanostructured materials, photocatalytic materials, process diagnostics, protective coatings against wear and erosion, and thermal barrier coatings. No index is provided, but the included CD-ROM presumably contains the contents in a searchable format. Annotation :2004 Book News, Inc., Portland, OR (booknews.com).

The demand for cast iron components, with weights ranging from a few kilograms to several tons, has increased significantly in recent years, both for technical and economic reasons. In fact, the lower cost compared to other alloys, and the good castability, which allow one to obtain near-net shape components in as-cast conditions, and the mechanical properties that can be obtained, are just some of the motivations that attract mechanical designers. However, correct design requires a good knowledge of the intrinsic correlation among alloy chemical composition, process parameters, microstructure (with casting defects) and mechanical properties. This book is aimed at collecting excellent and recent research experimental and theoretical works in this field. Technological (say, wear resistance and weldability) and mechanical properties (say, Young modulus, static and fatigue strength) of different grades of cast irons, ranging from solution strengthened ferritic ductile iron to compacted graphite iron as well as white and nodular cast irons, are correlated with the alloy chemical composition, process parameters and casting dimension.

This book presents the proceedings of the first vehicle engineering and vehicle industry conference. It captures the outcome of theoretical and practical studies as well as the future development trends in a wide field of automotive research. The themes of the conference include design, manufacturing, economic and educational topics.

A product of old money and a brilliant heart surgeon, Henry McLaughlan is condescending and pretentious, with a strong need for approval and a reputation for womanizing. Dark secrets from his youth contribute to his atheism, and Henry's medical skill alone has become his saving grace and the heart of his identity. Henry falls in love with Theresa Tabor, a widow and mother of two young children. "You're white water rafting and I'm a deep water port," Theresa jokes as they begin to work out their differences. Through her example and uncompromising confrontations, Henry gradually transcends past misery to yield his intrinsic decency and recover his faith in God. Unapologetic about her blue-collar, Catholic roots, Theresa marries Henry, then struggles with childbearing, a devastating accident, and his powerful family influences. A COUNTRY PLACE is a contemporary redemption story, and a tribute to the enduring bonds of love and family.

Despite 50 years of antibiotics, infection remains a major source of both morbidity and mortality. Immunosuppression, either secondary to drugs in transplant recipients or secondary to HIV, has expanded the number of microorganisms that are known to be pathogenic in man. Imaging of infection has a vital role both in the initial diagnosis and in the continuing management of patients with infection or suspected infection. Functional imaging using nuclear medicine techniques has a unique role to play in identifying sites of infection in a wide range of patients with varying clinical conditions. This book, written by a series of experts not just in the fields of nuclear medicine but also infectious disease and radiology, discusses the role of nuclear medicine in three parts: a review of the pathophysiology of infection; a technical description of those nuclear medicine techniques which can be used in imaging infection; an extensive systematic review including thoracic, abdominal and orthopaedic infection as well as a special section on the acutely ill patient, the immunosuppressed patient and the patient with pyrexia of unknown origin. This book will be of interest to all clinicians looking after patients with infection and who need to use imaging techniques. It will also be of use to radiologists and nuclear medicine physicians who will be using these techniques clinically.

Schweißen ist nach wie vor das wichtigste Fügeverfahren. Neben der unübertroffenen Wirtschaftlichkeit erlaubt es konstruktive Ausführungen, die in hohem Maße die Bedürfnisse nach Flexibilität und Gewichtsoptimierung berücksichtigen. Dieses Buch stellt alle relevanten und modernen Verfahren der Schweißtechnik vor und gibt umfassende Informationen zur anforderungs- und anwendungsgerechten Gestaltung von Schweißkonstruktionen. Wirtschaftlichkeitsbetrachtungen und ein Kapitel zur Qualitätssicherung geben wichtige Hinweise für die Praxis. Im Anhang befinden sich zahlreiche Tabellen für die richtige Einstellung der Schweißparameter sowie ein Auszug zu Normen.

CD-ROM contains full text for all the procedures available in the manual. Files are provided both as fully formatted Word 6.0 (.doc) documents and as text-only documents (.txt).
