Beran lab manual has long been a market leading lab manual for general chemistry. Each experiment is presented with concise objectives, a comprehensive list of techniques, and detailed lab intros and step-by-step procedures.

Green chemistry involves designing novel ways to create and

synthesize products and implement processes that will eliminate or greatly reduce negative environmental impacts.

The Green Chemistry Laboratory Manual for General Chemistry provides educational laboratory materials that challenge students with the customary topics found in a general chemistry laboratory

Following a consistent format, each lab experiment begins with objectives and prelab questions highlighting important issues that must be understood prior to getting started. This is followed by detailed step-by-step

investigations and further research about how green chemistry principles compare with traditional, more hazardous experimental methods. By placing the learned concepts within the larger context of green chemistry principles, the lab manual enables students to see how these principles can be

an introduction, a procedure, a page of pre-lab exercises about the concepts the lab illustrates, and a report form. Some have a scenario that places the experiment in a real-world context. For this edition, minor updates have been made to the lab manual to address some safety concerns.

The laboratory course described in the lab manual emphasizes experimental design, data analysis, and problem solving.

Inherent in the design is the emphasis on communication skills, both written and oral.

Students work in groups on open-ended projects in which they are given an initial scenario and

then asked to investigate a problem. There are no formalized instructions and students must plan and carry out their own investigations.
