At San Diego State University about 10 years ago a certificate in GIS was established requiring 27 units distributed almost equally between Geography and Computer Science. A few years later a San Diego Consortium made up of SDSU, Mesa College and San Diego city schools was awarded a grant by NSF-ATE (National Science Foundation- Advanced Technological Education) to develop a scalable skills certification program, articulate curriculum between institutions, and increase community awareness of GIS as a discipline and as a career. The GIS Test Bank is developed primarily to promote GIS education and career advancement. It is a web based application which can be accessed anywhere with an internet facility. It consists of various essay type and multiple choice questions with graphics from different GIS categories. The user has to provide login information in order to access the application. Once authenticated, based on the role as an administrator, faculty, teaching assistant or student, the user will be able to use the application based on the permissions given to them. Test bank can be used to prepare class tests, prepare for exams, give tests online whose scores will be automatically reported to the faculty, upload or access class lectures or handouts etc. The test bank initially emphasizes a class articulated between SDSU and community colleges.

Now in its second edition, Geographic Information Systems (GIS) for Disaster Management has been completely updated to take account of new developments in the field. Using a hands-on approach grounded in relevant GIS and disaster management theory and practice, this textbook continues the tradition of the benchmark first edition, providing coverage of GIS fundamentals applied to disaster management. Real-life case studies demonstrate GIS concepts and their applicability to the full disaster management cycle. The learning-by-example approach helps readers see how GIS for disaster management operates at local, state, national, and international scales through government, the private sector, non-governmental organizations, and volunteer groups. New in the second edition: a chapter on allied technologies that includes remote sensing, Global Positioning Systems (GPS), indoor navigation, and Unmanned Aerial Systems (UAS); thirteen new technical exercises that supplement theoretical and practical chapter discussions and fully reinforce concepts learned; enhanced boxed text and other pedagogical features to give readers even more practical advice; examination of new forms of world-wide disaster faced by society; discussion of new commercial and open-source GIS technology and techniques such as machine learning and the Internet of Things; new interviews with subject-matter and industry experts on GIS for disaster management in the US and abroad; new career advice on getting a first job in the industry. Learned yet accessible, Geographic Information Systems (GIS) for Disaster Management continues to be a valuable teaching tool for undergraduate and graduate instructors in the disaster management and GIS fields, as well as disaster management and humanitarian professionals. Please visit <http://gisfordisastermanagement.com> to view supplemental material such as slides and hands-on exercise video walkthroughs. This companion website offers valuable hands-on experience applying concepts to practice.
