The volume first investigates the impact of macroeconomic variables on equity values in emerging economies as compared with developed economies. Next it affirms the efficiency of the Midcontinent Independent System

Operator electricity exchange. Finally it investigates efforts to stimulate emerging nations around the world.

GL Rockey's Truth's of the Heart, an intellectual romance, published by Books We Love. A university professor newly married to an ex-football star turned sportscaster finds herself drawn towards a young art student who shares her intellectual and ultimately her physical passions.

This book is about the economics of developing countries' rise, based on the case of China and focuses on economic growth theory. It features traditional political economics and Chinese characteristics of socialism to examine the great economic development achievements of China within such a short period of time.

George Beckford left the Caribbean region, and the underdeveloped world in general, an extraordinary body of work that spanned his career as economics professor, advisor to governments, and consultant to international organizations. "George Beckford's work is characterized by a remarkable consistency of purpose and vision . . . [This collection presents] the unfolding of George Beckford's work from agricultural economics to political economy, to the social economy of 'man space', to the cultural roots of Caribbean creativity and a vision of one independent, sovereign and self-reliant Caribbean nation . . . His purpose was to reveal the legacy of dispossession originating in the slave plantation experience of African people in the New World; to 'free the mind' from the internalization of attitudes of inferiority and 'Afro-Saxon' mimicry. His vision was the affirmation of the culture of 'overcoming' rooted in the Caribbean 'peasantry' and the land". Introduction

When the English Civil War broke out, London's economy was diverse and dynamic, closely connected through commercial networks with the rest of England and with Europe, Asia and North America. As such it was uniquely vulnerable to hostile acts by supporters of the king, both those at large in the country and those within the capital. Yet despite numerous difficulties, the capital remained the economic powerhouse of the nation and was arguably the single most important element in Parliament's eventual victory. For London's wealth enabled Parliament to take up arms in 1642 and sustained it through the difficult first year and a half of the war, without which Parliament's ultimate victory would not have been possible. In this book the various sectors of London's economy are examined and compared, as the war progressed. It also looks closely at the impact of war on the major pillars of the London economy, namely London's role in external and internal trade, and manufacturing in London. The impact of the increasing burden of taxation on the capital is another key area that is studied and which yields surprising conclusions. The Civil War caused a major economic crisis in the capital, not only because of the interrelationship between its economy and that of the rest of England, but also because of its function as the hub of the social and economic networks of the kingdom and of the rest of the world. The crisis was managed, however, and one of the strengths of this study is its revelation of the means by which the city's government sought to understand and ameliorate the unique economic circumstances which afflicted it.

Cross-disciplinary and critical in its approach, The SAGE Handbook of Housing Studies is an elucidating look at the key issues within the field. It covers the study of housing retrospectively, but also analyses the future directions of research and theory, demonstrating how it can contribute to wider debates in the social sciences. A comprehensive introductory chapter is followed by four parts offering complete coverage of the area: Markets: examines the perception of housing markets, how they function in different contexts, and the importance of housing behaviour and neighbourhoods Approaches: looks at how other disciplines - economics, geography, and sociology - have informed the direction of housing studies Context: traces the interactions between housing studies and other aspects of society, providing context to debate housing through issues of space, social, welfare and the environment. Policy: is a multi-disciplinary and comprehensive take on the major policy issues and the causes and possible solutions of housing problems such as regeneration and homelessness. Edited by leading names in the field and including international contributions, the book is a stimulating, wide-ranging read that will be an invaluable resource for academics and researchers in geography, urban studies, sociology, social policy, economics and politics.

The first fifteen years of the 21st century have thrown into sharp relief the challenges of growth, equity, stability, and sustainability facing the world economy. In addition, they have exposed the inadequacies of mainstream economics in providing answers to these challenges. This volume gathers over 50 leading scholars from around the world to offer a forward-looking perspective of economic geography to understanding the various building blocks, relationships, and trajectories in the world economy. The perspective is at the same time grounded in theory and in the experiences of particular places. Reviewing state-of-the-art of economic geography, setting agendas, and with illustrations and empirical evidence from all over the world, the book should be an essential reference for students, researchers, as well as strategists and policy makers. Building on the success of the first edition, this volume offers a radically revised, updated, and broader approach to economic geography. With the backdrop of the global financial crisis, finance is investigated in chapters on financial stability, financial innovation, global financial networks, the global map of savings and investments, and financialization. Environmental challenges are addressed in chapters on resource economies, vulnerability of regions to climate change, carbon markets, and energy transitions. Distribution and consumption feature alongside more established topics on the firm, innovation, and work. The handbook also captures the theoretical and conceptual innovations of the last fifteen years, including evolutionary economic geography and the global production networks approach. Addressing the dangers of inequality, instability, and environmental crisis head-on, the volume concludes with strategies for growth and new ways of envisioning the spatiality of economy for the future.

Includes rewritten papers from a session on free-standing companies held at the 11th International Economic History Congress, in Milan, Italy, Sept. 1994.

In this major new collection, leading experts explore the multidisciplinary connections between technology and economy, drawing on new convergences between economic sociology and science and technology studies. Through theoretical and empirical studies, the authors investigate: * economics and economic knowledges as technologies * the economies as socio-technical arrangements * the nature of innovation * the role of technological mediations in representing and performing economies. This revealing book, ideal for those with an interest in contemporary social theory, interrogates the evidence for the contemporary claims about the emergence of the "new economy" and "knowledge-based economies" and sheds new light on the relationship between economy and culture.
