Global economy and its business environment, and thus the world of work, have recently been influenced by demographic and social changes, globalisation, as well as rapid development and introduction of novel, sophisticated and previously unknown technologies and new business models, especially in the context of the so-called fourth industrial revolution. These changes

pose a number of challenges in terms of maintaining and improving occupational safety and health (OSH) management performance, as traditional approaches to OSH management in new working environments may no longer be effective. In view of the above, the overall goal of this book is to present new approaches and methods for improving the effectiveness of OSH management. They are based on state-of-the-art research and are in line with the latest trends and concepts in the field. The book focuses on five thematic areas, which are discussed in respective chapters: 1) Implementing the process

approach to OSH management; 2) Improving OSH management systems with fuzzy cognitive maps; 3) Implementing strategic thinking approaches in relation to OSH management; 4) Integrating OSH management within the framework of the CSR concept; 5) Enhancing OSH management processes through the use of smart digital technologies. The methods and solutions discussed may be considered as specific "opportunities" for the improvement to be taken into account in the processes of implementing and maintaining an OSH management system in light of the requirements of the new ISO 45001 standard.

In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little

empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. Sports-Related Concussions in Youth: Improving the Science, Changing the Culture reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors,

military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. Sports-Related Concussions in Youth finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively

influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to *Sports-Related Concussions in Youth*, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with

concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.

income countries, the manual is applicable to countries that have different levels of helmet use. The book provides practical, step-by-step guidance on the design, implementation and evaluation of a helmet use program, as well as practical advice on its marketing and publicity. The technical processes described are illustrated using case studies from both developed and developing countries.
