The methods for teaching mathematics usually follow the structure of mathematics. The problem with this is that the structure of mathematics took centuries of elaboration to develop and is not the same as how one originally experiences mathematics. Based on research of how mathematics is actually learned, this book presents an innovative approach for teaching mathematics that will engage pupils and can have lifelong benefits for how they take on board more advanced mathematical topics. Math Makes Sense! makes use of the realistic mathematics education (RME) philosophy, which bridges the gap between informal mathematics learning (such as in day-to-day life) and more formal teaching in school. Many real-life situations as examples for learning are included, as well as different mathematical and logic puzzles that will stimulate learning and foster understanding. The ideas presented are not confined to one national curriculum and so can be helpful worldwide to teachers/ instructors (both in practice and those

Developing communication skills in mathematics is an important part of school curriculum, and many standardized tests require written explanations on how math problems are solved. This book provides teachers strategies to engage students in math discussions, integrate the writing process, and assess their work. A writing checklist and a reflection page are also included. For students, there are opportunities to solve math problems and practice writing explanations on how the problems were solved. The activities focus on number sense and operations, geometry, measurement, and data analysis. A scoring rubric and answer key is also provided.
