Certain varieties of spinach can survive in drought-tolerant areas, but don't love the heat. Instead, you can grow Malabar spinach, which actually isn't spinach at all, but cooks down similarly, though has more of a kale like texture when raw. It's a vine, and spreads quickly—so container gardening is often recommended for it.

How to harvest water and nutrients, select drought-tolerant plants, and create natural diversity Because climatic uncertainty has now become "the new normal," many farmers, gardeners and orchard-keepers in North America are desperately seeking ways to adapt their food production to become more resilient in the face of such "global weirding." This book draws upon the wisdom and technical knowledge from desert farming traditions all around the world to offer time-tried strategies for: Building greater moisture-holding capacity and nutrients in soils Protecting fields from damaging winds, drought, and floods Harvesting water from uplands to use in rain gardens and terraces filled with perennial crops Delecting fruits, nuts, succulents, and herbaceous perennials that are best suited to warmer, drier climates Gary Paul Nabhan is one of the world's experts on the agricultural traditions of arid lands. For this book he has visited indigenous and traditional farmers in the Gobi Desert, the Arabian Peninsula, the Sahara Desert, and Andalusia, as well as the Sonoran, Chihuahuan, and Painted deserts of North America, to learn firsthand their techniques and designs aimed at reducing heat and drought stress on orchards, fields, and dooryard gardens. This practical book also includes colorful "parables from the field" that exemplify how desert farmers think about increasing the carrying capacity and resilience of the lands and waters they steward. It is replete with detailed descriptions and diagrams of how to implement these desert-adapted practices in your own backyard, orchard, or farm. This unique book is useful not only for farmers and permaculturists in the arid reaches of the Southwest or other desert regions. Its techniques and prophetic vision for achieving food security in the face of climate change may well need to be implemented across most of North America over the next half-century, and are already

“Growing Food in the High Desert County” is a comprehensive gardening book with emphasis on growing vegetables. The author seeks to help the high desert dweller cope with the problems of raising plants in a dry land. From practical experience, she learned that her familiar East coast gardening techniques were not suitable to the high country so she developed the special methods given in this book. In addition to vegetables, Ms. Weinberg discusses various aspects of fruit tree culture in the high desert and drought-tolerant perennials, shrubs and trees. A special chapter on common garden pests tells how to control them without the use of commercial pesticides. JULIE BEHREND WEINBERG studied organic horticulture and agriculture at Goddard College. She has written weekly garden columns for both the “Santa Fe Reporter” and “The Santa Fe New Mexican.”

Explains how to grow organic foods in desert climates, with sections devoted to vegetables, fruits and nuts, and controlling extreme pests organically.

2016 Silver Nautilus Book Award Winner for Green Living & Sustainability Are you facing drought or water shortages? Gardening with Less Water offers simple, inexpensive, low-tech techniques for watering your garden much more efficiently — using up to 90 percent less water for the same results. With illustrated step-by-step instructions, David Bainbridge shows you how to install buried clay pots and pipes, wicking systems, and other porous containers that deliver water directly to a plant's roots with little to no evaporation. These systems are available at hardware stores and garden centers; are easy to set up and use; and work for garden beds, container gardens, and trees.
