Hemp and cannabis, both belonging to *Cannabis sativa*, have emerged as some of the most valuable crops because of their multiple functionalities - industrial, medicinal, and recreational uses. Like all other crops, they are at risk of diseases and pests. In certain cases, an entire hemp field can

fail due to unexpected disease. As a new and highly regulated crop, research on Cannabis crop diseases is scarce, and the science of plant diagnostics is not well covered in the literature. Taking hemp/cannabis as a model crop, the book illustrates how to diagnose a disease

problem and how to manage it effectively. It presents real disease cases encountered during crop production, and explains methods of diagnosis, both in the field and in the lab, in order to find out the cause(s).

2003. This highly original and accessible book draws on the author's personal experience as a musician, producer and teacher of popular music to discuss the ways in which audio technology and musical creativity in pop music are inextricably bound

together. This relationship, the book argues, is exemplified by the work of Trevor Horn, who is widely acknowledged as the most important, innovative and successful British pop record producer of the early 1980s. In the first part of the book, Timothy Warner presents a definition

of pop as distinct from rock music, and goes on to consider the ways technological developments, such as the transition from analogue to digital, transform working practices and, as a result, impact on the creative process of producing pop.
