Shortlisted for the BMA Book Awards and Macavity Awards 2016 Fourteen novels. Fourteen poisons. Just because it's fiction doesn't mean it's all made-up ... Agatha Christie revelled in the use of poison to kill off unfortunate victims in her books; indeed, she employed it more than any other murder method, with the poison itself often being a central part of the novel. Her choice of deadly substances was far from random – the characteristics of each often provide vital clues to the discovery of the murderer. With gunshots or stabbings the cause of death is obvious, but this is not the case with poisons. How is it that some compounds prove so deadly, and in such tiny amounts? Christie's extensive chemical knowledge provides the backdrop for *A is for Arsenic*, in which Kathryn Harkup investigates the poisons used by the murderer in fourteen classic Agatha Christie mysteries. It looks at why certain chemicals kill, how they interact with the body, the cases that may have inspired Christie, and the feasibility of obtaining, administering and detecting these poisons, both at the time the novel was written and today. *A is for Arsenic* is a celebration of the use of science by the undisputed Queen of Crime.

A triumphantly toxic tome. As a dedicated Macinnis fan, I relish this latest display of erudition, story-telling and fun. One of his very best.' Robyn Williams, Head, ABC Science Unit Was Abraham Lincoln really as mad as a hatter? Who poisoned Phar Lap? Can wallpaper really kill? Was Jack the Ripper an arsenic eater? Painting a broad canvas, from the early Egyptians to the arsenical tube wells in Bangladesh and the Sarin gas attacks in a Tokyo subway, *The Killer Bean of Calabar* explores the accidental and intentional tales of poisons and their use throughout history. Historically difficult substances to trace, poisons have been used by many for their own dastardly purposes, from the Great Poisoners such as Nero and Madame de Brinvilliers to the mass gassings of World War II. But the truly great poisoners are those who make selective use of poisons to save human life, not the few who use poison to take human life. Most of the medicines we take are themselves poisons - therapeutic only by virtue of being more deadly to our viruses than to us. Poisons are all around us - from the plants in our gardens and lead in our homes, to the bacteria and toxins in our bodies. With ripping yarns and unusual views of famous people, Macinnis explains the whys and wherefores of poisons and poisoning.
